Leavenworth MATCH Number: 130411
Topeka MATCH Number: 130412
Applications Due: November 15

Dear prospective interns,

Thank you for checking out our training brochure! We are glad that you are considering completing your doctoral internship training at a VA, and specifically, at our site. The purpose of this brochure is to describe the internship program at the VA Eastern Kansas Health Care System (VAEK). We have often heard from internship applicants that our brochure does not do justice to the quality of our VAEK training program. Applicants have commented that they were pleasantly surprised by the warmth and enthusiasm of our training supervisors, the breadth and depth of our training opportunities, and the flexibility of our program to meet the individual training goals of each intern. We hope this letter provides a more complete introduction to our program – a way that might aid applicants in understanding why we believe our program is one of the best in the country!

VAEK has a long history of training psychologists. Internship training began at the Topeka campus in 1946, and was one of the first training programs to be started in the VA. We were first VA psychology internship program to be accredited by the American Psychological Association (APA) in 1974, and our program has maintained continual APA accreditation since (we anticipate our next site visit in the fall of 2025). Currently, VAEK is a multi-faceted program, providing opportunities for diverse training experiences amidst a supportive and flexible setting. We operate from a scientist-practitioner model and promote measurement-based care and evidence-based practices. We also recognize the importance of the common factors in psychotherapy – to include the therapeutic alliance, the healing setting, and the psychotherapeutic structure. Our training opportunities are designed to give our interns the opportunity to integrate both the science and art of psychology practice, an integration that we believe leads to improved clinical outcomes, better insight into change processes, and increased satisfaction with clinical work.

We are committed to and passionate about our program and training the next generation of psychologists. Furthermore, we are dedicated to providing a supportive

and welcoming environment that values relationships and personal growth. Therefore, we place a high value on offering quality supervision, welcoming people with diverse backgrounds and characteristics, and ensuring clinical care respectful of human diversity. Supervisors aid interns in creating a training plan which recognizes training goals in a true generalist model – taking into account the individual intern’s clinical strengths and growth edges. VAEK supervisors pride themselves on creating safe learning environments, in which interns are able to continue to expand clinical strengths and also challenge themselves in areas in which they have limited prior experiences. We are also committed to creating a therapeutic environment for, and ensure ethical treatment of, patients with diverse backgrounds and characteristics. As such, an important goal of the training program is to increase interns’ knowledge and skills in working with a wide range of clients from different cultural backgrounds.

Lastly, we want you to know that our program values a balance in dedicated clinical work and self-care. The investment that has been made to get a doctoral degree in psychology is SIGNIFICANT, and we believe that maintaining work-life balance allows the best opportunity for maintaining a long and fulfilling career in the field. Our internship is a 40-hour work week, and while we expect our interns to be at work on time, we also expect them to leave work ON TIME! In order to protect the work-life balance, we don’t want, nor do we allow, interns to work evenings or weekends. Our philosophy is that the best clinical work comes from providers who are as invested in their non-psychology lives as they are in their psychology lives!

So, if you are asking yourself “*Why would I want to come to Kansas?*,” trust us – many of us have asked ourselves the same question. If you ask many of our former interns, they will tell you they didn’t plan on coming to VAEK for internship, but once they interviewed with us, they decided it was a great place for training. Then, if you ask many of our staff members (who were former interns), they will likely tell you they just couldn’t leave. So - be forewarned - if you decide to apply to VAEK for internship, you just might end up deciding you like it enough to stay.

Thank you for taking the time to review our brochure. Please let us know if there are any additional questions that we can answer. Best of luck as you continue your career in psychology.

I. What Can Interns Do? - Training Experiences

TRAINING ROTATIONS

Rotations at Eastern Kansas are purposefully designed to be flexible yet comprehensive. Interns will complete three four-month major rotations during the course of their training year. Major rotation experiences are intensive immersion experiences, requiring 16-20 hours per week, and are selected collaboratively by the intern and supervisors with assistance of the training director. At Leavenworth, major rotations include the Domiciliary (DOM), Integrated Health (IH), Neuropsychology, and Substance Use Disorder Clinic (SUDC), and at Topeka, major rotations include Community Living Center (CLC), Mental Health Clinic (MHC), Neuropsychology, Primary Care Mental Health Integration (PCMHI), Psychiatric Recovery and Wellness Program (PRWP), and Stress Disorder Treatment Program (SDTP). Interns will also complete a required year-long rotation in Evidence Based Practices (EBPs) as well as carry assessment cases throughout the year. In addition, interns will have up to four hours allotted to engage in other clinical activities consistent with training goals; these are *optional* elective or sampling experiences that offer the intern an opportunity to gain broader experiences in a variety of clinical areas. Elective experiences are dependent upon the major rotation and, like the major, are decided upon collaboratively with supervisors. Fridays are partially reserved for training activities including supervision with the training director, peer supervision, and didactics, though interns may also have elective clinical experiences and/or report writing on Fridays.

Major Rotations	Elective Experiences
<u>Leavenworth</u> Domiciliary (DOM) Integrated Health (IH) Neuropsychology Substance Use Disorder Clinic (SUDC)	<u>Leavenworth</u> Suicide Prevention Threat Assessment and Management (TAM) Whole Health Women's Health Clinic (WHC)
<u>Topeka</u> Mental Health Clinic (MHC) Neuropsychology Primary Care Mental Health Integration (PCMHI) Psychiatric Recovery and Wellness Program (PRWP) Stress Disorder Treatment Program (SDTP) Community Living Center (CLC)	<u>Topeka</u> Addictions Suicide Prevention Threat Assessment and Management (TAM) Whole Health <i>**Note: Some major rotations may be able to offer elective experiences though not guaranteed.</i>

At the beginning of the year, the intern class meets all of the staff to learn about the different training opportunities from each clinical area/staff member. There is flexibility to design the day of the rotation to meet the training goals of the intern. For example, an intern might select a particular day to be on a rotation to participate in a specific group offered on that day. Also the intern and the supervisor will decide what kinds of cases to work on together. The training director creates the rotation schedules in close collaboration with the intern class and supervisors. Interns will have an opportunity to voice their preferences in major rotations and elective experiences, along with the ordering of rotations; the training director will attempt to accommodate those preferences as best as possible though may not be guaranteed due to unit/staff availability.

Close monitoring of the rotation contracts throughout the year assures that interns complete all the competencies in a timely manner. It is believed that interns will present to the training program with

different strengths and weaknesses reflective of their University or Professional School emphasis in training. Therefore, the flexibility allows us to build on their strengths and efficiently address their growth areas.

Eastern Kansas interns are exposed to diverse populations and diagnoses in a variety of settings. A range of training experiences in intervention and assessment are available throughout the rotations. The table below illustrates how time is allocated to different clinical activities during the internship year.

<i>1st Rotation – 4 months</i>	<i>2nd Rotation – 4 months</i>	<i>3rd Rotation – 4 months</i>
Major Rotation #1 16-20 hours	Major Rotation #2 16-20 hours	Major Rotation #3 16-20 hours
Elective Clinical Experiences 0-4 hours	Elective Clinical Experiences 0-4 hours	Elective Clinical Experiences 0-4 hours
Required – Evidence Based Practices 8 hours		
Required – Assessment 4-6 hours		
Didactics and Supervision 4 hours		

This table highlights training experiences that are available at VAEK (as well as those that are not available at our facility).

MAJOR ROTATIONS – LEAVENWORTH

DOMICILIARY

Interested in being part of a multidisciplinary team of providers? Want to work with a diverse population of Veterans? If so, this rotation awaits you! The Domiciliary is a co-ed, recovery-oriented, 40-bed general mental health residential rehabilitation treatment program (MHR RTP). The Domiciliary provides services and care for a variety of issues including homelessness, chronic and persistent mental illness, substance use disorders, chronic health issues, employment readiness, return to a state of independence, and reintegration into the community of their choice, with a typical length of stay of 90 days.

Team members may include a psychologist, social worker, rehabilitation technician, vocational rehabilitation specialist, psychiatrist, nurse, physician or nurse practitioner, dietitian, therapy assistant, and recreational therapist.

Training opportunities for interns include:

- Multidisciplinary teamwork
- Case management
- Group Psychotherapy
- Brief or long-term individual psychotherapy
- Psychodiagnostic evaluations
- Brief assessments
- Crisis management
- Program development and/or evaluation

Interns may also participate in a variety of other individual training goals as identified.

INTEGRATED HEALTH (IH)

The Integrated Health (IH) rotation is composed of several clinic rotations. Most of the intern's major rotation (about 16 hours) will be housed within Primary Care Mental Health Integration (PCMHI) clinic, while remaining hours can be accumulated in Women's Health Clinic or Whole Health.

PRIMARY CARE MENTAL HEALTH INTEGRATION (PCMHI)

When an intern participates in the Primary Care Mental Health Integration (PCMHI) rotation, they will gain extensive experience delivering behavioral health services in a primary care setting. Interns will work alongside a variety of different disciplines such as physicians, nurses, dietitians, social workers, medical support assistants, and pharmacists. Clinical work includes brief and focused interventions targeted at treating common mental health concerns, as well as interventions designed to improve an individual's physical health.

Interns will be afforded opportunity to master the following practices:

- 30-minute focused assessments
- Warm handoffs
- Brief cognitive and ADHD screening
- Consultation with providers from a variety of disciplines
- Health behavior interventions

Depending on interests, interns could also gain experience with:

- Primary care protocols such as Prolonged Exposure for Primary Care, Problem Solving Training, Cognitive Behavioral Therapy for Insomnia, and Brief CBT for Chronic Pain
- Brief CBT, Focused ACT, and Motivational Interviewing
- Pre-surgical evaluations
- Specialized work with geriatrics populations
- Presentations for medical staff
- Program/group development

WHOLE HEALTH

Interns on the Whole Health minor rotation will have a unique opportunity to do administrative and program development work as well as teaching and training of medical center staff. Interns will have the opportunity to work alongside a variety of disciplines and collaborate with specialty clinics within the hospital. There are few opportunities for clinical work, which will be completed in collaboration with the supervisor.

Experiences interns may have on the Whole Health rotation:

- Observation and shadowing of Whole Health leadership to learn about program development and Whole Health implementation
- Education about tracking and collecting Whole Health data
- Offering Whole Health education to staff (Whole Health 102)
- Co-facilitating Whole Health groups with Whole Health Clinicians and Coaches (Introduction to Whole Health [General, Pain, and Weight Management focused])
- Clinical work is limited but may include: MOVE! Group, Mindfulness for Chronic Pain Group, Individual Mindfulness sessions, and The Great Outdoors group
- Participating in teaching Motivational Interviewing and Patient-Centered Communication skills (TEACH for Success) to PACT staff
- Assisting PACT team members with using MI and patient-centered communication skills through consultation, joint sessions, or observation and feedback
- Assisting with presentations/trainings on using MI and patient-centered communication
- Potential to collaborate with other specialty clinics for teaching/training

WOMEN'S HEALTH CLINIC (WHC)

On the Women's Health Clinic rotation, interns will do clinical work in a primary care setting, collaborating with primary care providers, nurses, social workers, health coaches, and psychiatry staff. Training will include integration of medical comorbidities and medication side effects as part of comprehensive assessment and care. Interns can provide both individual therapy for female veterans ranging in age from 18 to 80. Group psychotherapy experiences can include preventive care during pregnancy, support for Multiple Sclerosis, and PTSD recovery.

NEUROPSYCHOLOGY

A rotation in Neuropsychology consists of administering neuropsychological assessment instruments, scoring and interpreting the results, and writing an integrated, meaningful report. The test results are combined with medical history, behavioral observations, and clinical interviews to formulate a diagnosis and appropriate treatment recommendations. Feedback and education would then be provided by the intern to the referring source, as well as to the Veteran and possibly family members.

Of note, the neuropsychology rotation will host one trainee per training period and we cannot guarantee the order in which an intern may receive neuropsychology training.

SUBSTANCE USE DISORDER CLINIC (SUDC)

The Substance Use Disorder Clinic serves diverse Veterans throughout the medical center who present with concerns related to alcohol or other substance use. On this rotation, interns will be involved in a comprehensive substance use disorder (SUD) experience to help prepare them for entry into VA or community-based psychology positions working with individuals experiencing addiction-related issues. Supervisors are flexible and able to supervise a range of students, from those with no prior SUD treatment experience to those who are seeking advanced training in this area.

Interns on this rotation will have the opportunity to do:

- Individual therapy approaches including Motivational Interviewing (MI), Motivational Enhancement Therapy (MET), and Cognitive Behavioral Therapy for Substance Use Disorder (CBT-SUD)
- Group therapy facilitation (with group materials based on Motivational Interviewing and CBT-SUD)
- Contingency Management (CM) for the treatment of stimulant use disorders and cannabis use disorder
- Participation within a multidisciplinary treatment team

MAJOR ROTATIONS – TOPEKA

MENTAL HEALTH CLINIC

The Mental Health Clinic delivers services to over 1,800 Veterans. The rotation offers the opportunity for a diverse clinical experience focused on the delivery of evidence based episodic care and psychological assessment. Interns participating in this rotation will enhance their skills at assessing the appropriate level of care, type of service, and referring to appropriate colleagues and completing quality and in-depth psychosocial assessments. This rotation focuses on developing dynamic treatment plans focused on shared decision making and individualized measurement-based goals. To fulfill these treatment plans the interns will utilize a variety of measures to provide measurement-based care, evidence-based protocols, and evidence-based interventions. There is a focus on enhancing clinical skills to integrate data from the veteran's presentation and measurement-based care to create a detailed case conceptualization and providing feedback regarding treatment effectiveness and maintaining the dynamic and collaborative nature of the treatment plan. As part of this rotation, interns will participate in a multidisciplinary team consisting of psychologists, psychiatrists, nurse practitioners, nurses, social workers, and suicide prevention to increase effective and collaborative care. Interns can also individualize the rotation by selecting from optional opportunities available for the MHC rotation including group psychotherapy (acute psychiatry, substance, general mental health), individual psychotherapy for substance use disorders, risk assessment, and psychological testing (personality, ADHD, and/or ASD).

Interns on this rotation will have the opportunity to do the following:

- Intake assessments
- Co-facilitate individual psychotherapy and therapy groups in outpatient mental health
- Provide individual time-limited psychotherapy, including EBPs
- Consultation

Depending on their interests, interns could also gain experiences with:

- Integrate into the SUD interdisciplinary team and provide SUD specific EBPs in individual therapy
- Taking on additional assessment or psychotherapy experiences
- Developing their own psychotherapy group
- Integrated psychological assessment
- Co-facilitate groups in acute psychiatry

NEUROPSYCHOLOGY

The Neuropsychology Clinic is responsible for the cognitive assessment of adults with known or suspected central nervous system dysfunction. Referrals come to the clinic from throughout the facility and include both inpatients and outpatients. Common clinical populations include traumatic brain injury, dementia, seizure disorder, stroke, neoplasm, and pseudo-neurologic disorders. The clinic utilizes a flexible battery approach to neuropsychological assessment. The test results are combined with medical history, behavioral observations and clinical interviews to formulate a diagnosis and appropriate treatment recommendations. Particular emphasis is placed on writing meaningful reports that are helpful to both the patient and the referral source.

Interns on this rotation will have the opportunity to:

- Learn to administer, score, and interpret a variety of neuropsychological measures
- Write meaningful reports that are helpful to both patients and referral sources
- Participate in ongoing discussions of research findings, professional issues, and a variety of neurological disorders
- Review brain imaging and its integration with neuropsychological data

PRIMARY CARE MENTAL HEALTH INTEGRATION

The Primary Care Mental Health Integration (PCMHI) rotation allows interns to gain experience in delivery of behavioral health interventions within a primary care setting. We work as an integrated member of the medical team alongside physicians, dietitians, medical support assistants, and pharmacists. Veterans' level of needs in primary care mental health may range from disease prevention to learning how to cope with a life-threatening illness. Veterans will also present with varying levels of mental health needs, with mild-moderate difficulties being treated within the primary care setting. Commitment to this rotation is a 20 hour-per-week minimum, and time will be used to serve Veterans and medical staff as well as generate referrals through continued development of relationships with primary care providers.

Interns on this rotation will have the opportunity to:

- Learn how to conduct a focused 30-minute functional assessment
- Structure brief and time-limited 30-minute psychotherapy sessions
- Receive warm hand-offs
- Fulfill the role of a behavioral health consultant within a multidisciplinary team
- Provide consultative services to medical staff
- Participate in staff training
- Complete transplant, bariatric, and spinal cord stimulator evaluations
- Integrate whole health coaching into treatment of Veterans as well as the primary care clinic
- Learn how to appropriately refer Veterans to specialty clinics within the VA system
- Shadow psychiatric APRN to learn about medication management within PCMHI
- Provide interventions through virtual modalities

Depending on interests, interns could also gain experience with:

- Cognitive Behavioral Therapy for Insomnia (CBT-I)
- Motivational Interviewing
- Brief trauma treatment (PE-PC)
- Smoking Cessation and Alcohol Reduction
- Cognitive Behavioral Therapy for Chronic Pain (CBT-CP)
- Problem Solving Therapy (PST)
- Conjoint management of opioid tapering with PCP
- Brief Cognitive Behavioral Therapy interventions

PSYCHIATRIC RECOVERY AND WELLNESS (PRWP):

Psychiatric Recovery and Wellness Program (PRWP) is a 4-week, 17-bed residential treatment program aimed at mental health recovery through whole health concepts and behavioral activation. PRWP assists Veterans presenting with a variety of concerns, including depression, anxiety, PTSD, relationship issues, maladaptive coping, substance abuse, etc. Services are offered via group therapy and psychoeducational groups. Interns will be trained in the implementation of the Therapeutic Lifestyle Change protocol, which emphasizes physical activity, social engagement, sleep hygiene, exposure to sunlight, dietary changes, and anti-rumination strategies in the interest of improving mood management. Additional group work involving CBT, STAIR, DBT and ACT skills training rounds out the picture. Previous inpatient/residential experience is not a requirement.

Interns have the opportunity to:

- Facilitate and co-facilitate psychoeducational groups
- Provide group and individual psychotherapy
- Gain exposure to a variety of clinical presentations, including serious mental illness
- Practice within the context of an interdisciplinary team
- Participate in program development and measurement-based care
- Ad Hoc Individual Therapy

- Ad Hoc Psychological Assessment

STRESS DISORDER TREATMENT PROGRAM (SDTP):

The SDTP offers a 5-week residential recovery treatment program for Veterans with Posttraumatic Stress Disorder (PTSD) and other stress-related disorders. This 17-bed unit is designed to help Veterans and active duty personnel deal more effectively with traumatic experiences that have occurred throughout their lives. Combat trauma, military sexual trauma (MST), and other kinds of traumas are treated utilizing Cognitive Processing Therapy (CPT) in primarily group formats within a context of measurement based care. SDTP is a part of a nationally developed research program aimed at implementing and expanding the massed delivery of EBPs aimed at reducing wait times for Veterans seeking care, as well as reducing early dropout rates in treatment programs. The SDTP provides the intern an opportunity to develop numerous therapeutic and diagnostic skills while immersed in a trauma-focused recovery environment.

Interns on this rotation will have the opportunity to:

- Be a member of an interdisciplinary treatment team and participate in daily treatment team meetings
- Co-lead CPT groups for PTSD with MST, combat, and other kinds of trauma

Depending on their interests, interns could also gain experiences with:

- Psychological testing
- Conducting individual counseling that is aimed at reducing PTSD symptoms/avoidance

REQUIRED MINOR ROTATIONS

EVIDENCE BASED PRACTICES (EBPs)

The Evidence Based Practices rotation is a year-long minor operated within the Mental Health Clinic (MHC) for Leavenworth interns and the PTSD Clinical Team (PCT) for Topeka interns. The MHC teams are composed of psychiatry, psychology, social work, and psychiatric nursing, providing services to Veterans presenting with a variety of mental health needs, whereas the PCT is a multi-disciplinary treatment team (three psychologists, a nurse, and consulting prescribers) providing outpatient services for Veterans diagnosed with PTSD. PCT – whose mission is to facilitate PTSD recovery – is under the direction of a supervisory psychologist, Dr. Jim Sharpnack, and provides care to over 500 Veterans.

Supervision between the intern and supervisor occurs in several ways: weekly one-on-one supervision sessions, feedback on recorded sessions and documentation, and (potentially) acting as co-therapists in groups. Interns have the opportunity to develop skills in the following Evidence Based Practices (EBPs):

- Topeka PCT
 - Cognitive Processing Therapy (CPT)
 - Prolonged Exposure (PE)
 - Written Exposure Therapy (WET)
 - Depending on interests and opportunities, the intern may also get the opportunity to develop skills from the following EBPs: Acceptance and Commitment Therapy (ACT), Cognitive Behavioral Therapy for Insomnia (CBT-I), Cognitive Behavioral Therapy for Depression (CBT-D), Cognitive Behavioral Therapy for Chronic Pain (CBT-CP)
- Leavenworth MHC
 - CPT
 - PE
 - WET
 - CBT-D

- CBT-I
- CBT-CP
- ACT
- CBT for trauma-related nightmares (CBT-N)

PSYCHODIAGNOSTIC ASSESSMENT

Interns are also expected to engage in psychodiagnostics assessment throughout the training year. This consists of administering personality, behavioral, and screening assessment instruments (including both objective and projective measures), scoring and interpreting the results, and writing an integrated, comprehensive and succinct report. The test results are combined with medical history, behavioral observations, and clinical interviews to formulate a diagnosis and appropriate treatment recommendations. Feedback and education would then be provided by the intern to the referring source, as well as to the Veteran and possibly family members.

OPTIONAL ELECTIVES

COMMUNITY LIVING CENTER (CLC) – TOPEKA ONLY

The Community Living Center (CLC) rotation includes provision of inpatient psychological and neuropsychological services to the Meadowlark Community Living Center and Sunflower Community Living Center. The Meadowlark CLC provides Veterans with subacute rehabilitation care, skilled nursing care, and palliative/hospice care. The Sunflower CLC provides long-term memory care and referrals have a previously established dementia diagnosis. Behavioral health services within the rotation include inpatient neuropsychological assessments and feedback sessions (Meadowlark CLC only), individual psychotherapy services (both CLC's), group psychoeducation and consultation services with Veterans and their family members (both CLC's), mental health consultation to CLC staff (both CLC's), and participation in weekly interdisciplinary team rounds to support treatment planning (both CLC's). The rotation offers notable variability in day-to-day operations, with emphasis on supporting both the mental health needs of the Veterans and the consultation/support needs of the CLC staff. A minor rotation in the CLC is potentially best paired with a major rotation in neuropsychology, given the significant overlap in neurocognitive assessment services.

Interns on this rotation will have the opportunity to:

- Learn administration, scoring, and interpretation of a variety of neuropsychological test batteries that will compliment training in the outpatient neuropsychology rotation, including brief/bedside evaluations in subacute care, cognitive and mood screenings, safety/risk assessments, and functional living assessments
- Develop concise report writing skills for an inpatient medical setting
- Provide individual psychotherapy services to a diverse Veteran population, including subacute and chronic illness/injury, palliative/hospice care, and long-term memory care
- Provide behavioral health consultation to memory care providers, and support behavioral health goals in long-term care (behavioral health enrichment, identifying interventions for behavioral safety and well-being in dementia care)

Participate in interdisciplinary team rounds, including communication of neurocognitive test results and relevant psychotherapy treatment updates to other medical professions, and actively participate in treatment planning with other services (Physician/Nurse Practitioner, PT, OT, Social Work, SLP, Pharmacy, Dietician, Nursing, Music Therapy, Recreation Therapy)

SUICIDE PREVENTION

Suicide Prevention is a fast-paced and varied elective experience, offering a broad spectrum of opportunities, ranging from crisis management to program development and improvement. The suicide prevention team is responsible for identifying and flagging Veterans in our health care system who are at high risk for suicide, coordinating enhanced follow-up care, communicating with BHIP teams, and regularly reviewing High Risk flags. We respond to Veterans who have called the Veterans Crisis Line, consult with staff regarding high risk patients, and regularly engage with concerned family members.

A rotation could look like a bit from each of these or a focus on just one area. Potential training opportunities include:

- Clinical offerings: gaining familiarity with suicide risk and protective factors, following up with Veterans who call the Veteran Crisis Line, completing CSREs, responding to questions/concerns from hospital staff, leading groups (including the SAVE group in the Domiciliary for Leavenworth trainees and the Safety Planning group in Acute Psychiatry unit for Topeka trainees), following up with high risk folks as needed.
- Data and metrics: engaging in performance improvement work with metrics, presenting this data to a variety of settings including to leadership, participating in research projects, developing SOPs, streamlining team procedures
- Presentations and education: providing community outreach, tabling at events, developing/enhancing/offering staff training materials and presentations

Participation in the suicide prevention program can be individualized, depending on the interests of the intern (and, to a lesser extent, the needs of the program). For example, you can learn more about leadership opportunities at the VA and how to lead a team.

THREAT ASSESSMENT AND MANAGEMENT (TAM)

The vision of the Workplace Violence Prevention Program (WVPP) is to achieve a workplace free from disruptive and violent behaviors to promote the delivery of care, effective, Veteran-centered healthcare. Threat Assessment and Management (TAM) is complex and nuanced, particularly because the VA is prohibited from the practice of banning or barring Veterans from VHA health care, even those who are the most disruptive, threatening, and/or violent. The WVPP oversees the Disruptive Behavior Committee (focusing on patient-related disruptive behavior), the Employee Threat Assessment Team (focusing on employee-related disruptive behavior), and the Prevention & Management of Disruptive Behavior program (which provides training to staff).

A rotation within Threat Assessment and Management will primarily focus on the tasks associated with the Disruptive Behavior Committee. Training opportunities include the following:

- Regular attendance at Disruptive Behavior Committee meetings (Wednesday afternoons)
- Committee member level access in the Disruptive Behavior Reporting System to receive and view reports
- Learning the non-restrictive and restrictive interventions
- Training in and regular completion of structured professional judgments tools (VRAI-G and VRAI-S, when applicable) to identify the level of violence risk and/or threat present
- Training in and regular completion of two-year Category I Behavioral PRF reviews
- Consultation with the patient's treatment team to develop patient-centric threat reduction management plans
- Engaging in data analytics to determine which areas of the hospital are experiencing the most frequent and/or aggressive forms of disruption, as well as determining the types of disruptive behavior that are occurring

WHOLE HEALTH

Interns on the Whole Health rotation will have a unique opportunity to offer Wellness classes that focus on utilizing the Whole Health model of care to manage chronic health conditions such as pain and weight management while still living a meaningful life. Along with Veteran-facing offerings, interns will also have the opportunity to participate in staff educational classes – such as teaching staff about Whole Health principles and MI training for clinicians. Finally, interns will receive training on how to consider adding Whole Health principles into their clinical work as psychotherapists and will receive exposure to program development opportunities.

Experiences interns may have on the Whole Health rotation:

- Learning how to use Complementary and Integrative Health services to support clinical interventions (such as Tai Chi and Yoga practices)
- Sleep interventions, including CBT-I and CPAP adherence
- Observation and shadowing of Whole Health leadership to learn about program development and Whole Health implementation
- Education about tracking and collecting Whole Health data
- Offering Whole Health education to staff (Whole Health 102)
- Co-facilitating Whole Health groups with Whole Health Coaches and Clinicians
- Assist PACT team members with using MI and patient-centered communication skills through consultation, joint sessions, or observation and feedback
- Assist with presentations/trainings on using MI and patient-centered communication
- Engage in Employee Whole Health Development
- Community Partnerships and Outreach Events

II. Who Would I Be Spending a Year With? - Training Staff

PSYCHOLOGY TRAINING STAFF (LEAVENWORTH)

Jared Barrow, Psy.D. (SUDC)

Undergraduate completed in engineering at Franklin W. Olin College of Engineering, completed doctoral degree at Florida Institute of Technology, with internship at the Leavenworth VAMC. It was such a great experience, I stayed on as staff! My interests include integrating diversity conversations throughout various applications of psychology, substance abuse, and program development. You can find me in my office or running (figuratively) around the Substance Use Disorders Clinic.

Keidy Ding, Ph.D. (100% virtual Mental Health Clinic)

Dr. Ding received her Ph.D. from Texas Woman's University and completed her internship at Federal Correctional Complex at Butner, NC. She moved to Memphis, TN to work for the Federal Bureau of Prison and then Memphis VA Medical Center. Dr. Ding joined Leavenworth VA in 2022. She completed VA EBP consultation process for Motivational Interviewing, CBT for Chronic Pain, CBT for insomnia, and Interpersonal Therapy for Depression. She is currently a VA national consultant for IPT for Depression. Other completed VA trainings include clinical hypnosis, CBT for depression, and ACT for depression. She spends her free time with her family balancing routines and exploring new things.

Leticia Duvivier, Ph.D. (HBPC/PCMHI)

Dr. Duvivier completed her internship at a medical university/VA consortium. She then completed a VA fellowship and worked at the same VA for another 3 years, until moving to VA Eastern Kansas. She now works with a primarily geriatric population in the Home-Based Primary Care Program, and loves being able to work with our older adult veterans who may otherwise not be able to receive services. She also works with a broader age group in PCMHI, where she enjoys a faster paced environment. She has completed VA certification for Cognitive Processing Therapy for PTSD, Motivational Interviewing, and Brief Cognitive Behavior Therapy for Chronic Pain. In HBPC and PCMHI she also delivers other brief interventions for depression, anxiety, sleep problems, PTSD, and other issues. In her free time, she enjoys trying out various crafts and hobbies.

Peter Gibson (PCMHI)

Originally from Wisconsin, Dr. Gibson made his way to a suburb of Chicago to study Bible and Theology at Wheaton College. Following that, he felt a sense of calling to mental health care, leading him to obtain his master's in counseling at Dallas Theological Seminary. Through mentorship by excellent professors, he found a passion for integrative psychology. This brought him back to Wheaton to pursue a PsyD. While at Wheaton a second time, Dr. Gibson had the opportunity to be a PCMHI extern at Jesse Brown, VA in Chicago, IL. He found health psychology especially enjoyable due to his experience as a student-athlete in his undergraduate career. This passion was solidified as an intern at the VA Eastern Kansas Health Care System and he eagerly accepted the offer to continue his PCMHI career with VAEKHCS. Dr. Gibson enjoys his role as the first line of psychological care to many veterans through warm handoffs. He finds it a privilege to acknowledge the dignity in each person he interacts with, and consistently uses person-centered and ACT techniques to align people's values to their lives. In his spare time, he enjoys spending time with his family, exercising, and enjoying the arts and sporting events.

Suzanne Heflin, Ph.D. (PCMHI)

Her first career was in computer programming. After saving the world from the Y2K zombie apocalypse, she decided to switch gears and become a psychologist. She obtained her master's degree from the University of Central Oklahoma, and her doctorate degree from the University of Missouri—Kansas City. She completed predoctoral internship at Kansas University Medical Center, and postdoctoral residency at the Kansas City VAMC. Her primary theory of orientation is Emotion Focused Therapy, but in session she regularly uses Acceptance and Commitment Therapy.

Benjamin A. Huston, Psy.D. (Suicide Prevention 2.0 Services)

Dr. Huston attended the University of Denver where he graduated with his master's in forensic psychology (2016) and then his Psy.D. (2020). Dr. Huston completed his Internship at the VAEKHCS, Leavenworth and was determined to stay around. His outside interests include science fiction, horror movies, board games, paleontology, birdwatching, and more. His wife, while supportive, describes these interests as "nerdy." Dr. Huston's areas of specialization include suicide prevention treatment and safety planning.

Crissy Irizarry-Anson Psy.D. LP (MHC)

Dr. Irizarry was raised in Puerto Rico and later moved to the USA after completing her undergraduate studies to join the Army. She has served actively for eight years and remains an Army Reservist, holding the rank of Lieutenant Colonel. Dr. Irizarry has been deployed to Afghanistan three times, with two long combat deployments and one short deployment. Her academic journey led her to Albizu University in Miami, FL, where she earned her M.S. and Psy.D. degrees with a focus on neuropsychology. Following that, she completed an internship in general psychology at the Fargo VA, where she received comprehensive training and supervision in a variety of psychological techniques and assessments, including DBT, CBT for Depression, Anxiety, Insomnia, P.E., CPT, WET, Seeking Safety (PTSD-SUD), Courage to Heal (MST), and Cognitive and Personality assessments. After her internship, she was hired as an inpatient acute care psychologist at the Fargo VA hospital. Subsequently, she transferred to Kansas to be closer to her family. She is a BHIP psychologist at the Veteran's Hospital in Leavenworth, KS. In her free time, she enjoys learning about other cultures and current war conflicts and engaging in running, biking, weightlifting, and traveling. However, her greatest joy comes from spending time with her family, friends, and dog, Chase.

Danna Letsch, Ph.D. (Site Training Director, Leavenworth; MHC)

Dr. Letsch was born and raised in the Midwest, obtained her Ph.D. from the University of Kansas in Lawrence, and completed her predoctoral internship at the Topeka VA. Once an EKHCS psychologist position posted, Dr. Letsch jumped at the opportunity to join the wonderful VA staff! In her free time, she enjoys weightlifting and yoga, scrapbooking, thrifting, attending art fairs and restaurants, and spending time with her husband, daughters, and friends.

Christina Menager, Ph.D. (Psychologist, Suicide Prevention)

Dr. Menager received her B.A. in Psychology and Classical Antiquity and her M.A. and Ph.D. in Clinical Psychology, all from the University of Kansas. She completed her predoctoral internship at VA Eastern Kansas Health Care System and her postdoctoral residency at the Kansas City VAMC. She returned to the Leavenworth VAMC in 2020 and joined the PCMHI team, before accepting a new position as the Suicide Prevention Program Manager in 2023. In her spare time, Dr. Menager enjoys spending time with family and friends, reading, cycling, baking, and playing with her dogs.

Erin E. Mills, Psy.D. (Local Recovery Coordinator)

Dr. Mills was born in East Texas and raised in the suburbs of Atlanta, GA. She obtained her B.S. in psychology from Arizona State University and her M.A. and Psy.D. from the Arizona School of Professional Psychology at Argosy University, Phoenix. She completed her predoctoral internship at the Leavenworth VA and a postdoctoral fellowship with an emphasis in substance abuse at the Dallas VA. She was excited when the opportunity presented itself to return to the Leavenworth VA and join the SUDC team as a psychologist in 2020. In 2023, Dr. Mills accepted a position as the Local Recovery Coordinator for VA Eastern Kansas and continues to serve in that role. Dr. Mills has a strong commitment to working with Veterans as she has many family members who have served in the military, including her husband. She enjoys hiking, traveling, and spending time with her husband and pets in her spare time.

Rebecca L. Moberly, Ph.D. (Women's Health Center)

Dr. Moberly has been with VA for 19 years, 8 years here in Leavenworth in the Women's Health Center and the previous 11 years on the Spinal Cord Injury/Disorders Unit in Augusta, Georgia. Her background working as a part of primary care teams is the foundation for integrating physical and mental health care. Prior to joining VA, she worked in the school system in Hawaii, with children and families in Missouri and Kansas, in outpatient mental health, doing disability evaluations, and in both state and federal corrections.

She is an avid amateur genealogist, enjoys baking, and loves to read. She loves boxers--even the one that set her house on fire.

P. Chad Neal, Ph.D. (Associate Chief of Psychology, Leavenworth Campus)

Dr. Neal moved a lot as the child of a contractor to Texas, South Korea, the Philippines, California, Connecticut, and Pennsylvania. He eventually got stuck in the small town of Poteau, Oklahoma where he came out as gay around the year 1993. That was not fun, but that experience helped to set him on the path of becoming a psychologist. Dr. Neal loves to teach and has chosen many roles in psychology to fulfill that love such as being the director of training, providing CEs, and serving as a consultant for different EBP trainings. Dr. Neal serves as consultant for the VA Prolonged Exposure training initiative, and has completed EBP trainings in PE, CBT individual, CBT group, Motivational Interviewing, Primary Care Mental Health Integration, Cognitive Behavioral Therapy for Chronic Pain, and Cognitive Behavioral Therapy for Insomnia. He works with patients in the outpatient mental health clinic. Please feel free to talk nerdy to me about Star Wars, Star Trek (TNG, DS9, Strange New Worlds, Lower Decks), Nintendo, or Lego (AFOL here).

Christie Nelson, Psy.D. (Workplace Violence Prevention Program Coordinator)

Christie completed her internship at Atascadero State Hospital (ASH), a maximum-security forensic state hospital. Following internship, she was hired as an ASH psychologist, and her primary job duties focused on the detection of malingering and evaluation of competency to stand trial. During a seven-year tenure with the Bureau of Prisons, she served as Drug Abuse Program Coordinator and held a collateral duty of Mental Health Consultant on the Crisis Negotiation Team. She joined the VA in September 2018 and holds membership with the Association for Threat Assessment Professionals. Christie enjoys traveling, exercising, spending time with her family, watching the Premier League, and attending Sporting KC games.

Debra O'Connell, Ph.D., ABPP (Neuropsychology)

Dr. O'Connell was born and raised in Southern California and earned a B.A. degree from the University of California, San Diego with a double major in Psychology and Archaeology. After a brief detour into a career in post-production and telecommunications (thanks, recession!), she decided to finally pursue her dream of attending graduate school in clinical psychology. After receiving a total of one interview and one offer, she earned her M.S. and Ph.D. from Washington State University in Pullman, Washington (Go Cougs!). During her first year of graduate school, she fell in love with neuropsychological assessment and decided to steer her training opportunities and career in that direction. She completed her pre-doctoral internship at the VA Puget Sound Healthcare System – American Lake Division (neuropsychology track) and then went on to finish a two-year post-doctoral fellowship in clinical neuropsychology at the University of Nebraska Medical Center in Omaha, Nebraska. She is board certified in Clinical Neuropsychology by the American Board of Professional Psychology. Her main areas of clinical interest are memory disorders, movement disorders, and somatoform/functional disorders. Her areas of research interest are in psychopathic personality traits and executive functions as well as inter-rater reliability. In her free time, she enjoys binge-watching murder shows (the cheesier the reenactments the better), spending time with her cat, Dublin, and weightlifting.

Jasmine Petr, Ph.D. (Mental Health Clinic and LGBTQ+ Veteran Care Coordinator)

Dr. Petr obtained her M.S. from the University of Memphis and her Ph.D. from the University of Missouri—Kansas City. She completed her internship at the VAEKHCS, Leavenworth and her postdoctoral residency at the Kansas City VAMC. Her theoretical orientation is Acceptance and Commitment Therapy. Her professional interests include grief (particularly within the Black community), trauma, and gender affirming care. Her outside interests include reading horror, tracing her family tree, and playing video games like Cozy Grove, Cult of the Lamb, and Stardew Valley. She also likes to spend time with her husband, stepson, and kitty.

Jenny M. Rosinski, Ph.D. (SUDC)

A proud Iowa native, Dr. Rosinski was fortunate to begin her career as an undergraduate at the University of Iowa. She later received specialized training in the treatment of substance use disorders within the Clinical Psychology doctoral program at the University of Missouri-Columbia where she was mentored by

Dr. Kenneth Sher. Dr. Rosinski continued her training as an intern at the VA Eastern Kansas Health Care System. She became a staff psychologist in the Addiction Treatment Program in 2009 and has served as coordinator of the program (now the Substance Use Disorder Clinic) since 2015. Dr. Rosinski enjoys her role as a consultant for VA's Motivational Interviewing/Motivational Enhancement Therapy Training Program working with staff from many VA sites. Having both a father and spouse who served in the military adds to Dr. Rosinski's commitment to working with a Veteran population.

Jennifer Shah, Psy.D. (Psychologist, Health Behavior Coordinator – Whole Health, VISN 15 Network Education Coordinator for Whole Health)

Dr. Jenny Shah grew up in a small town in New Hampshire and completed her undergraduate degree in Psychology at New England College. She went on to complete a master's degree in clinical psychology at Roger Williams University in Bristol, Rhode Island, followed by a Psy.D. in Clinical Psychology at Florida Institute of Technology in Melbourne, Florida. She completed her internship at Gulf Coast VA in Biloxi, Mississippi and Postdoctoral Fellowship (Behavioral Medicine focus) at VA Boston. She started at Leavenworth VA in 2019. She enjoys a good cup of coffee, being in nature, concerts, spending time with friends and family, tattoos, and reading.

Alison Swisher, Psy.D. (100% virtual Mental Health Clinic)

Dr. Swisher obtained her Psy.D. from the University of Denver, and she completed her internship at the Charles George VAMC in Asheville, NC. She was excited to join the EKHCS team, initially as the PTSD/SUD Psychologist, but now as a fully remote Mental Health Clinic Psychologist so she can move around the country with her military family. As the child of a service member, and an Army spouse she has spent most of her life on the move, but she claims Denver, CO as her home. When she isn't at work, you can usually find her hiking with her two little boys, hitting a terrible golf shot on a local course, or trying a new restaurant in the area.

Daniel D. Trent, Ph.D. (aka Dr. Dan) (Psychologist, MHRTP/Domiciliary Program)

Dr. Trent began his current stint in the Veteran's Health Administration in 2017, working as a Domiciliary Program psychologist as well as in the Mental Health Clinic. Prior to 2017, he spent nearly 22 years working in the Federal Bureau of Prisons. He was able to go home most nights and served as Chief of Psychology for nearly 16 of those 22 years. Dr. Dan graduated with a doctorate in Counseling Psychology from the University of Kansas and completed internship in 1995 here at the Dwight D Eisenhower VAMC. Dr. Dan's emphasis is on CBT group therapy, criminal psychology, SUD treatment, and conflict resolution/anger management.

PSYCHOLOGY TRAINING STAFF (TOPEKA)

Brad Anderson, Ph.D. (Neuropsychology)

Dr. Anderson was raised on an Illinois farm and received his A.B. from Augustana College, where he played basketball and double majored in Psychology and Philosophy. He pursued a career in psychology after learning that philosophy ranked just below wizardry in employment opportunities, and he earned a Ph.D. in Clinical Psychology from the University of Health Sciences/The Chicago Medical School with an emphasis in neuropsychology and Chicago-style pizza. Internship was completed at the University of Oklahoma Health Sciences Center, where he attended the Oklahoma State Prison Rodeo (as a spectator) and was mentored by Russell Adams and the late great Oscar Parsons. In a successful effort to delay financial gratification, the next two years were spent completing a neuropsychology residency at the Medical College of Wisconsin. During this time, he proposed to his future wife at the top of a roller coaster (she said yes between gravity-induced screams) and convinced her to join him in Kansas – home of the world's largest hand dug well, the world's largest ball of twine, and the world's largest prairie dog (spoiler alert: it's a concrete statue). Dr. Anderson was first employed as the neuropsychologist of an acute head injury rehabilitation hospital in Overland Park, where he worked for two years prior to joining the Topeka VA in 1995. Youthful activities that extended through graduate school (hot-rodding a 1968 Mustang, solo backpacking and climbing trips, and a secretive stint behind the wheel of a stock car) have given way to more responsible pastimes, including kayaking, fly fishing, and home remodeling. He cannot be found on Facebook, Twitter, Insta-whatever, or watching "reality" television shows. He frequents the western prairies in the fall, the Rocky Mountains anytime, and the engine compartment of a cantankerous Jeep. Dr. Anderson shares a country home with his wife (Caryn – who still loves roller coasters and Kansas), a British Labrador retriever (Murphy), and assorted wild creatures that roam their property.

Michael Black, Ph.D. (Psychiatric Recovery and Wellness Program)

I attended the University of Kansas (2006) and have post-doctoral training in neuropsychological assessment and primary care psychology. My specializations are Therapeutic Lifestyle Change, trauma treatment, mindfulness, emotion regulation, attachment theory, and evolutionary psychology. I am keenly interested in the intersection of neuroscience and psychotherapy. Apart from my professional interests, I enjoy collecting vinyl records, biking, hiking, and midcentury design. I'm also into film and film history. I am especially drawn zombie narratives and how they depict our relationship to various psychological problems, such as problem-solving under extreme stress, effective cooperation with others, and the role of emotion in our definition of what it means to be human.

Jamye B. Brown, Ph.D. (Director of Clinical Training/PTSD Clinical Team)

Dr. Brown grew up in rural Oklahoma and attended the University of Tulsa where she crammed four years of undergraduate education into five and earned a bachelor's in psychology. She then went south to "most beautiful village on the plains" – Auburn University. At Auburn, she became a Toomer-Tree hugging (RIP poor oaks), War-Eagle cheering, orange-and-blue-wearing Tiger fan. Dr. Brown also studied up on all the good things to eat in the South – and discovered that grits aren't just for breakfast, butter really IS its own food group, and anything can be deep-fried (and it will taste amazing!). Though busy with the gridiron and the gluttony, she was able to squeeze in a fellowship with the Infantry Forces Research Unit at Fort Benning and also complete her Ph.D. in Counseling Psychology. Dr. Brown's career goal was to work at the VA and she was lucky enough to be selected as an intern at the Topeka VAMC. After internship, she completed her post-doctoral requirements at Lansing Correctional Facility in the maximum-security area. She was freed from the prison by an opportunity to return to the Topeka VA as a staff psychologist – and she jumped on it! Aside from her work, Dr. Brown enjoys gardening and home improvement projects. She has a Great Pyrenees (Gracie the Wonder Dog) and a rehabilitated barn cat (Tatiana). Dr. Brown likes music and shopping for shoes. She also enjoys kayaking and hiking. She aspires to travel more – and tries to visit at least one National Park per year. She loves to cook – and can't seem to break off her dysfunctional relationships with butter and the deep fryer. She continues to be an avid supporter of the Auburn Tigers. Dr. Brown works in PCT and is the Director of Clinical Training. She is credentialed in Cognitive Processing Therapy, Prolonged Exposure, Written Exposure Therapy, and Cognitive Behavioral Therapy for Chronic Pain.

Tara Clark, PsyD (Mental Health Clinic)

Dr. Clark comes to the Sunflower State from the Keystone State by way of the Show Me and Buckeye States. She attended graduate school in the Show Me State (The School of Professional Psychology at Forest Institute- Clinical Psychology), focusing on developing her skills to become a well-rounded and eclectic therapist. She went into this field believing that therapeutic match was the most important part of the therapeutic process and that it is not the client's job to fit into her therapeutic orientation, but her job to adjust and be flexible within her orientation and approaches to intervention. From graduate school, she landed in the Buckeye State, where she now calls home (O-H!), to complete her training and find her passions. Therapeutically, she developed a passion for Adventure Therapy and how experiential practice can enhance and carry therapeutic interventions to the next level, and.... the dreaded role play (*ominous voice). Personally, she was able to get back to her love of nature and water and be closer to her family. She grew up with Presque Isle within 5 minutes of her house and being in Missouri was an adjustment with its lack of Great Lakes, however, she loved the people, the pace, and friendliness of the Midwest. After her formal training was complete, she found a new passion of working with Veterans, Substance Use Disorders, and virtual care within the VA system. When the opportunity arose to come back to the Midwest, and the Midwest culture, while staying close to home by working virtually she could not wait to join the team here in Topeka! Therapeutically, she now gravitates more toward the Cognitive Behavioral side of things, but still embraces her relational and experiential approach to therapy through third wave CBT approaches like Acceptance Commitment Therapy. She really values variety in her work and caseload working with individuals with different diagnoses, stressors, and acuity; being a trainer-consultant for the national distribution of Cognitive Behavior Therapy for Substance Use Disorders and Cognitive Behavioral Coping Skills Group for Substance Use Disorders; and supervision. As for supervision, probably one of the things you care about most, she is a developmental, strengths-based supervisor who embraces the parallel process of supervision and the work you do as individuals developing their skills to become independently licensed psychologists.

Stephanie LaRue Davis, Ph.D. (Psychiatric Recovery and Wellness Program)

University of Kansas, 2002. (Rock Chalk!) Licensed Psychologist in Kansas. Dr. Davis brings a trauma-informed perspective to her work, and her groups on PRWP include STAIR (Skills Training in Affective and Interpersonal Regulation), Core Issues, and TLC (Therapeutic Lifestyle Change for Depression). She is VA-trained in several empirically-based psychotherapies including Prolonged Exposure Therapy, Cognitive Processing Therapy, Seeking Safety, and Problem-Solving Training. She enjoys traveling, gardening, and being the mom of a wonderful daughter and a mischievous Maltese pup.

Jonathan Denman, Psy.D. (Chief of Psychology)

After receiving a bachelor's degree from Harding University, he was accepted into the clinical psychology program at Regent University in Virginia Beach, VA. With the Virginia Beach/Norfolk area being heavily populated by active-duty military and finding early success working with military clients in the university counseling center, he pursued a practicum at the Hampton VA in the PTSD clinic. This experience eventually led him to one of the best internship sites in the nation, VA Eastern Kansas Health Care System (VAEKHCS). Having no idea where Topeka was located (and being pre-iPhone era), he unfolded his map and made his way to Kansas. To his surprise, Eastern Kansas actually had hills and trees and many wonderful opportunities. After an incredible year of internship training and a couple years in community mental health, he joined the VA in Marion IL as a staff psychologist. He was eventually promoted to manager of the Primary Care Mental Health Integration Program and then later selected as the Associate Chief of Behavioral Medicine. Returning to VAEKHCS in 2019 as the Chief of Psychology/Behavioral Health Associate Service Line Manager, he now works with some of the most competent and passionate psychologists in the field. He is passionate about understanding the human condition, building successful teams, and the future of mental health care in the VA. Clinical practice includes participation in a psychological assessment clinic and a variety of evidence psychotherapy interventions (CBT-D, CBT-I, MI/MET). Hobbies include carb counting, tracking his teenagers' whereabouts by iPhone location, and trying trendy IPAs that generally taste horrible.

Kalyn Diamond, Ph.D. (Women's Health Clinic)

Born in Houston, TX, she grew up in a farming community in South Central Oklahoma. After high school (32 in her class), ventured to the still small, but larger Stillwater, Oklahoma to attend Oklahoma State

University as an undecided major. Although considering a psychology degree, she eventually settled on elementary education, and afterwards set off for Alaska as an adventure, teaching elementary school for 12 years in Alaska. While there, she had so many adventures she would never have been able to experience living anywhere else. She took a year's leave from her teaching job to return to Oklahoma so her young son could get to know his grandparents. While there, she returned to OSU as a master's student in Counseling as she felt this would help her be a better teacher. While she enjoyed teaching a great deal, she found she loved psychology even more so, and took a second year's leave to complete her M.S. However, instead of returning to her Alaska teaching job that fall, she moved to Kansas to begin her Ph.D. at the University of Kansas. At KU, she completed a paid summer traineeship, her year-long doctoral practicum, and an additional assessment practicum at the Topeka VA. Then internship at the Missouri Health Sciences Psychology Consortium as a Columbia VA intern, finishing her dissertation, and obtaining her Ph.D. with a minor in Health Psychology, she returned to the Topeka VA as a psychologist, 13 years as geropsychologist, then 2.5 years as VISN 15 Centralized Eligibility and Appeals Team (CEAT) psychologist for the Caregiver Support Program, with 10% clinical time in Women's Health. She returned to Topeka VA a second time in Nov 2022, as Women's Health primary care psychologist, but continued a VACO Specialty CEAT detail position two days a week doing remand letters from the Veterans' Board of Appeals the first year in the new position. She serves as Topeka VA's designated Women's Mental Health Champion, enjoys providing EBPs and is VA credentialed in a number of them, is a perennial student with many interests past and present, including health psychology, geropsychology, dementia, pain management, insomnia, coping with chronic medical illness, women's issues, and reproductive mental health.

Jennifer Fontaine, Psy.D. (Primary Care-Mental Health Integration)

While Dr. Fontaine was born and raised in the Kansas City metro area, she has lived in Colorado most of her adult life. She was fortunate to spend 25 years in the mountain west, raising three kids and pursuing her hobbies, which include hiking, skiing and mountain biking. After spending 10 years in private practice, and 10 years with the Department of Defense as a primary care behavioral health provider and national trainer, she recently moved back to Kansas City to be near her family, accepting an opportunity at the Eastern Kansas VA as the program manager for primary care mental health integration (PCMHI). While her commute is not her favorite part of her day, she is able to live in a beautiful old neighborhood with huge trees, a vegetable garden, and many flowers. Daisy, a 9-year old Boston Terrier, is also very much enjoying the new digs in KC! So many squirrels, so little time. Dr. Fontaine's three adult sons are pursuing their individual goals in different parts of the world, which means many opportunities for travel!

Alissa Kim, Ph.D. (Stress Disorder Treatment Program)

Dr. Kim has been a lifelong resident of Kansas, minus the brief exception of a scholarly detour to Kansas City, Missouri, to attend graduate school. Although her confusion remains as to why a sizeable section of Kansas City is in Missouri, she is happy to call Kansas her home state once more. Growing up, Dr. Kim was a curious child always asking for new and interesting things to play with or explore. While her curiosity occasionally got her into trouble, it also meant that she found school to be above average in its enjoyment factor. Finding the realm of academia to be an excellent source of "new and interesting things", Dr. Kim found herself completing a B.A. in both Psychology and Sociology from Kansas Wesleyan University and, shortly after, her Ph.D. in Clinical Psychology from the University of Missouri-Kansas City. While in the process of completing her doctoral internship at the Colmery-O'Neil VA Medical Center in Topeka, KS, Dr. Kim was offered a position to remain as a staff member post internship, which she happily accepted. She currently works as a Graduate Staff Psychologist in the Stress Disorder Treatment Program. While Dr. Kim has accepted her fate (she is tethered by an invisible force to the great state of Kansas), she supposes it is not a bad place to call home. During her free time, Dr. Kim enjoys frequenting festivals (where she was first introduced to the wonders of cheese curds and fried green tomatoes), expanding her coin collection, watching cheesy action movies, spending time outdoors, and driving to her hometown to visit family.

Dr. Julia Kogan, PsyD (Primary Care-Mental Health Integration)

Dr. Kogan is a virtual provider living in Chicago. She has been working in the VA for the past 11 years. She completed her doctoral degree in clinical psychology with an emphasis in neuropsychology. She completed her internship at the Vanderbilt-VA Consortium focused on neuropsychology and health

psychology. She completed her postdoctoral training at the Miami VA in health psychology. Dr. Kogan was the program manager for PCMHI at Jesse Brown VA in Chicago for 5 years before joining Eastern Kansas VA as a virtual provider in PCMHI. She is currently the PCMHI facility trainer. She has completed VA training in CBT-I, MI, CBT-CP, and other evidence-based trainings. She is also a Triple P Positive Parenting consultant. In her free time, she enjoys teaching group fitness, spending time outside with her dog Kygo, and Latin dancing.

Leif Frederick (Eric) Lyche, Ph.D. (Mental Health Clinic)

Dr. Lyche was born in California but primarily grew up in Europe. His parents were both from Norway. He came back to the U.S. to complete high school in Lake Jackson, Texas before attending the University of Texas in Austin. He received his B.B.A. degree with a concentration in Finance. After college he moved back to California and worked three years for the Internal Revenue Service before going to Tulane University in New Orleans and receiving an M.B.A. with concentrations in Finance and Human Resources Management. He met his wife while living in California. They have four children, two sons and two daughters. Recently they also became grandparents which they really love. After several jobs in the business field, he decided to make a career switch and went back to school at San Diego State University and received his M.A. degree in Psychology before moving to Kansas to start a Ph.D. program in Counseling Psychology at the University of Kansas. He graduated with his doctorate in 2012 after completing an internship at Northwest Missouri Psychiatric Rehabilitation Center. Subsequently he completed a postdoctoral fellowship at Larned State Hospital in their Psychiatric Services Program. He gained a lot of valuable experience dealing with people with severe and persistent mental illness. After living a year in Larned, he was happy to be able to come back to Lawrence and start working at the Colmery-O'Neil VA Medical Center where he had previously worked as a practicum student while attending the University of Kansas. He is now primarily doing individual counseling in the mental health clinic in addition to doing some groups in the acute psychiatry unit.

Jessica Modrell, Psy.D. (Whole Health)

Dr. Modrell was born in Fort Collins, Co and raised in Nebraska. Growing up in Nebraska exposed her to the importance of number two yellow dent corn, cow tipping, and of course Husker football. She is married to her husband Justin, and they have two sons Samuel and Theodore, and one daughter, Paityn. She attended George Fox University in Portland, Oregon where she earned her doctorate in clinical psychology. She is the Whole Health Program Manager for Eastern Kansas and is passionate about organizational health, systems process improvements, and preventative care. In her spare time, she enjoys spending time on the lake with her family, following KU basketball, and attending her kids' sporting events. She is passionate about her work with the Veteran population and adores every minute of being a mom.

Scott Ploharz, Ph.D. (Primary Care-Mental Health Integration)

Dr. Scott Ploharz Grew up in Utah and spent as much time as possible in the mountains, leading to some anxiety later in life when moving to western Kansas and being on such an "exposed" flat area. He attended Weber State University, majoring in Psychology, and also Child and Family Sciences. Attended Fort Hays State University in Hays Kansas to complete a Clinical Psychology Master's degree and then a Ph.D. in Counseling Psychology from the University of Kansas. He completed a Practicum and Internship at the Leavenworth VA prior to joining the Topeka VA as a PCMHI Psychologist.

Darlene Ramos Sostre, Ph.D. (SUD/PTSD Clinical Team)

Born and raised under the warm Caribbean sun, I'm a proud Puerto Rican who believes saltwater truly *does* heal everything. I grew up with sand between my toes, ocean breeze in my hair, and a deep love for helping others—so naturally, I pursued a B.A. in Psychology and Community Mental Health (with a minor in Theatre, because why not add a little drama to the mix?). I went on to complete both my M.S. and Ph.D. in Clinical Psychology at Ponce Health Sciences University, where I trained in health psychology and conducted my dissertation on the mental health impacts of endometriosis—a project close to my heart that deepened my passion for the mind-body connection. Throughout my training, I developed a strong interest in the intersection of physical and mental health. During my predoctoral internship, I discovered a deep love (and serious respect) for trauma work, which has led me to my current role in the PTSD Clinical Team, where I also have the opportunity to work with individuals navigating substance use

disorders. I believe in showing up for people as whole humans—with compassion, evidence-based care, and sometimes a bit of humor. My journey to the VA began long before I was a psychologist. My grandfather, a proud Puerto Rican Vietnam Veteran, was a major influence in my life. I spent countless hours by his side at VA appointments, listening to his military stories and watching the dedication of VA staff. I used to tell him, "I want to be one of the people who takes care of people that served like you"—and here I am! When the opportunity to train and work at the VA came along, I jumped at it. My grandpa is beyond proud, and honestly, so am I. Personally, I'm passionate about strong coffee, my two mischievous boy cats, and making sure my bookshelf always has more unread horror and fantasy novels than I'll ever admit. Outside of the therapy room, you can find me at exercising (gym, pilates, walks), daydreaming about being at the beach or my next travel destination, or trying new food at a new place. Fun fact: my very first pet was a baby cow who I named Cleo (short for Cleopatra), gifted to me by my grandma at age five! I love connecting with new people, and I'm excited to be part of a training community that celebrates growth, authenticity, and diversity. If you see me, don't hesitate to say "Hola!"

Andrew Schauer, Ph.D. (Mental Health Clinic/Acute Psychiatry)

Born during the Eisenhower administration, Dr. Schauer grew up on the West Coast negotiating the war protests and civil rights issues of California life in the late 1960s - early 1970s. Only his beard commemorates that pivotal time of development. Bent on a PhD in early American History, he earned an undergraduate History degree at California State University – Sacramento. The promise of driving a cab in LA with a PhD in History, prompted him to stay on for a fifth year earning a Psychology Degree (1976). The lure of \$84 a semester (parking \$15) kept him at Cal State achieving an MA in Psychology (1978). Never wanting to work in a hospital setting (where he's been working since 1981) and to focus on more "normal" people (still looking), he pursued a PhD in Counseling Psychology at the University of Missouri-Columbia. Pushed hard by his training director, he reluctantly came to the Topeka VA to complete an internship and his PhD (1981). He planned to go back West. Life intervened and he stayed on VA staff for the next 4 years leaving for private practice / community hospital practice when threatened with VA leadership training. For the next 25+ years, he worked primarily in a community hospital serving as a voting member in early heart transplant teams, participating on various gastric procedure teams, providing in-house hospital staff consultation as well as stress debriefings, and working with medical patients. His early work and publications (with other Topeka VA PhDs) focusing on Vietnam Vets – a time where limited PTSD understanding existed – prompted a wish to return to work (2010) with PTSD Veterans given a new body of literature and interventions. Currently, his primary tasks include coordinating and completing psychological test consultations, tele-psychology (individual, Prolonged Exposure therapies), and CBT-I. He continues married with two sons and a daughter (at last, someone will come to visit when he's in the nursing home) – all in some form of tax-payer status. Hobbies include reading, church activities, playing the piano (poorly), and fly fishing (fish need not fear).

Jim Sharpnack, Ph.D. (PTSD Clinical Team Program Coordinator)

Dr. Sharpnack was raised in Hominy, Oklahoma, which is a sprawling metropolis of 3,565 individuals, but this number may be inflated due to the possible inclusion of prisoners at a local medium security prison located outside of town. It should be immediately noted that Hominy is an Osage term meaning "Night Walker" and not a reference to a canned form of corn. Another interesting trivia fact involves the Hominy Indians, a professional football team, defeated the World Champion New York Giants 13-6 on December 26, 1927 in Pawhuska, Oklahoma, the city where he was born. He later attended the University of Oklahoma where he played trombone in the Pride of Oklahoma marching band for two years while cheering on his beloved Sooners during times of great elation and resounding defeat. He met his wife, Donna, during their freshman years, and they began attending Sooner basketball games. After graduating in 1993, they were married and moved to Logan, Utah where he enrolled as a graduate student in the Combined Professional Scientific Psychology program, a combination of clinical, counseling, and school psychology approaches, at Utah State University. He was commissioned as a Captain in the Air Force for his 1 year internship at Andrews Air Force Base in Maryland, and he served his remaining 3 years at Cannon Air Force Base near Clovis, New Mexico. After leaving the Air Force, he worked as an outpatient therapist and in various administrative duties at the Guidance Center in Leavenworth, Kansas. He began working at the Topeka VA in 2007 in the PCT program and became program coordinator in April 2012. He has been trained in Cognitive Processing Therapy, Prolonged Exposure, Cognitive Behavioral Couples Therapy for PTSD, and Integrative Behavioral Couples Therapy. He lives in Shawnee with his wife. They

have 2 children, Logan, possibly named after the Canadian born X Man, and Mary Jane, who coincidentally shares the same name as Spider-man's famous girlfriend/wife depending on what era of comics you are reading. Donna is a math teacher at a St. James Academy in Lenexa. He enjoys reading comics, going to the library, playing video games, reading science fiction/fantasy and nonfiction, attending comic book conventions, going to the movies, swimming, and cheering on the Oklahoma Sooners/Oklahoma City Thunder/ Pittsburgh Steelers/ Pittsburgh Pirates/Pittsburgh Penguins (he does acknowledge that Oklahoma and Pennsylvania don't share a border). His greatest influences include seeing Jaws at a drive in as a 4 year old, having a strong aversion to popsicle sticks, and avoiding the sun at all costs.

Aaron Van Gorp, Ph.D. (Neuropsychology, Community Living Center):

Dr. Van Gorp received his B.S. in Psychology from Iowa State University, and he remains a die-hard Cyclone fan. He wanted to be a chemical engineer but switched to psychology after deciding there was more to life than the periodic table. He obtained his M.S. in Clinical Mental Health Counseling from the University of Nebraska at Omaha, followed by his Ph.D. in Counseling Psychology from the University of Kansas. He planned to be a lifelong academic and specialized in vocational psychology at KU, but after taking a part-time job as a neuropsychology technician at a small private practice in Manhattan, Kansas, he was hooked on testing. He completed his predoctoral internship at the Topeka VA and trained in neuropsychology under Dr. Anderson, and he was generally astounded that so many good psychologists could congregate in the middle-of-nowhere Kansas. Intent on filling out his Midwest public university bingo card, he completed postdoctoral residency in clinical neuropsychology at the University of Missouri. He was confident that he would eventually take a job near the ocean, any ocean. However, his partner (a Topeka native) was more important, and he returned to Kansas and the Topeka VA for full-time work in a split Neuropsychology and CLC position. In his free time, he enjoys spending time with his partner and their dogs Penny and Lura, especially driving across the country and DIY car camping. He also enjoys working on motorcycles and things with wheels (including various cars/trucks/vans and even bicycles), woodworking, collecting specialty tools for his garage, kayaking, and chasing squirrels out of his garden.

Alicia Wendler, Ph.D. (Assistant Chief, Psychology Services):

Dr. Wendler was born and raised in Kansas, with a notable exception of time living on the West Coast (Washington). She now adamantly proclaims *the West Coast IS the best coast*, but missed family too much so returned home after a few years. She completed her doctoral degree at the University of Missouri-Kansas City (Counseling Psychology) and had intentions to go into academia up until she started her pre-doctoral internship training at VA Eastern Kansas. This was during the period OIF/OEF Veterans began entering VA healthcare. Feeling inspired by supervisors, mentors, and the Veterans she was working with in treatment, she elected to pursue a VA career. Fortunately for her VA EKHCS was hiring. More fortunate for her, she obtained a permanent employment position (\$\$) in the newly emerging Primary Care Mental Health Integration vs. having to pursue post-doctoral training placements (\$). Dr. Wendler soon made her way to the substance use disorders treatment arena, where she has lived throughout her career, working in outpatient, inpatient, residential, and specialized opioid treatment programs. She enjoys learning about the latest neuroscience and clinical trials research to advance our understanding of addiction, treatment, and recovery. She is a national VA trainer and consultant in the CBT-SUD initiative and is also VA trained in CPT, MI, and CBT-D. Dr. Wendler enjoys traveling as a favored pastime, having now visited 5 of the 7 continents. The only downside to traveling is leaving her pets at home, including a terrier-chihuahua mix named *Ola*. Reportedly, she has developed quite a reputation in the neighborhood (*Ola*, not Dr. Wendler) and has been nicknamed *Little Monster*. Dr. Wendler also enjoys gardening, water activities, hiking, and aromatherapy. She tries to maintain a regular practice in mindfulness meditation, and credits neuroplasticity as the mechanism for us all to evolve into our best versions of ourselves.

Shannon Wilder, Ph.D. (PTSD Clinical Team):

Dr. Wilder was born and raised in a small town in Minnesota. She traveled to Portugal for a year and then completed her undergraduate degree in psychology at Ohio University in Athens, Ohio. After this, Dr. Wilder worked as a Project Manager at Case Western Reserve University for two years. She then completed her clinical psychology doctorate back at Ohio University. Although she had never been to Kansas before, she decided to apply to the Topeka VA because it was within driving distance of her

hometown. She was lucky enough to match and completed her internship at EKHCS. After internship, she moved to Wisconsin and spent a year working in the Mental Health Clinic at the Tomah VA. When a position at Eastern Kansas opened up, she was glad to return back to Kansas. She enjoys spending time with her family, watching horror movies, reading, and cooking.

III. What Do We Think About Training? - Training Model and Program Philosophy

The basic philosophy underlying our internship training program is grounded in the belief that given academic preparation of nearly a decade of undergraduate and graduate work, interns have attained a certain level of intellectual and emotional maturity which prepares them for the final formal educational and experiential step: the internship year. During the internship year, students are provided a supportive, supervised environment in which they continue to develop competencies while assuming growing responsibility for patients in preparation for functioning independently. Staff interactions with interns encourage movement toward autonomy. Interns at VAEK are actively involved in selecting supervisors, choosing training assignments, participating in training seminars and workshops, and providing evaluation and input into the internship program.

The VAEKHCS model for training is competency based within a scientist-practitioner framework. Competencies are defined by behavioral markers and are sequential, cumulative, and graded in complexity. Expectations are outlined in each of the competency areas for target level at end of each training period. The training year is divided into three training periods, and the intern is expected to achieve a higher level of competency with each successive training period.

The VAEKHCS is based upon a scientist-practitioner model as defined by several key components. Interns must evidence scientist-practitioner thinking as it applies to clinical work. The use of empirically supported treatments is required as a component of their clinical competencies. Interns will read current psychological literature and provide one research presentation. Interns will demonstrate competencies in empirical evaluations of their work, as evidenced through monitoring outcomes of their work.

Training occurs through didactic training, clinical experience, ongoing supervision, and periodic evaluations. Interns are prepared for the practice of psychology and, thus, to enter the professional field in positions reflective of the training received.

Our training program is sponsored by and viewed as an integral part of the VAEKHCS, whose mission is providing excellence in care to Veterans, military retirees, and dependents. The overarching goal of the training program is to provide professional growth opportunities for the interns and trainees while enhancing the quality of patient care.

VAEKHCS Psychology Internship Training Program values diversity in staff, interns, and Veteran consumers. Our program welcomes people with diverse backgrounds and characteristics. We seek to create a training environment welcoming of diverse interns and to provide clinical care respectful of human diversity. The Medical Center strives to create a therapeutic environment for, and ensure ethical treatment of, patients with diverse backgrounds and characteristics. Thus, an important goal of the training program is to increase interns' knowledge and skills in working with a wide range of clients from different cultural backgrounds.

IV. What Do We Hope to Do? - Program Goals & Objectives

The aim of the VA Eastern Kansas Health Care System Psychology Training Program is to create an emotionally supportive and intellectually challenging environment for the development of competent, caring, and ethical psychologists trained to skillfully work with diverse populations. We emphasize quality professional relationships, critical scientific thinking, and high-quality supervision. We are committed to providing training experiences which promote professional growth and meet the individual needs of each intern.

GOALS AND OBJECTIVES

The goals and objectives answer the question as to why we are providing a training program and how we intend to measure our success in meeting the goals.

Goal 1: Increase each intern's competency over the training year in preparation for the next level of professional development (Profession Wide Competencies)

- A. Demonstrate competency in research and scholarly inquiry
- B. Demonstrate competency in ethical and legal standards
- C. Demonstrate competency in individual and cultural diversity
- D. Demonstrate competency in professional values, attitudes, and behaviors
- E. Demonstrate competency in communication and interpersonal skills
- F. Demonstrate competency in assessment, conceptualization, and diagnosis
- G. Demonstrate competency in intervention
- H. Demonstrate competency in supervision
- I. Demonstrate competency in consultation and interpersonal communication

Goal 2: Develop and implement an intern-centered training plan

- A. Identify the individual training goals of each intern that include the intern's strengths, interests, and areas for growth
- B. Collaboratively select training experiences that promote development of the intern's professional competencies, that incorporate the individual goals of the intern, and that aid the intern in progressing to autonomy
- C. Write a competency development plan for each rotation which identifies specific competencies and how these will be achieved
- D. Foster a safe learning environment that promotes professional growth and exploration, recognizes and affirms the importance of continual professional growth, and enhances the intern's identity as a professional psychologist.

Goal 3: Provide a broad range of VA experiences to prepare the next generation of psychologists to meet the needs of our nation's veterans

- A. Complete a range of training rotations and experiences allowing for a broad generalist training experience
- B. Develop awareness of the unique dynamics of working with the Veteran population
- C. Balance training with productivity by setting recommended hour targets of 520 hours for the year for direct patient contact, 200 hours for the year of supervision, and 100 hours for the year of didactic training

The underlying philosophy, goals, and objectives profoundly affect the interaction between staff and interns. Interns are trained and encouraged to move toward autonomous functioning as professional psychologists in a scientist-practitioner model. The training program emphasizes the active involvement of the intern in choosing training experiences, participating in training seminars and workshops, and in providing input into the internship program. Interns are provided ongoing evaluation/feedback to assist them with self-monitoring their own progress toward autonomy.

V. How Is This Put Together? - Program Structure

OVERVIEW:

The VAEKHCS Psychology Internship Training Program was officially integrated with the new millennium. The two sites have a long independent APA-accredited history. The COVAMC training program in Topeka began in 1946, one of the first programs to be started in the Veterans Administration, and was fully accredited by APA in 1974. COVAMC was the first APA-accredited VA psychology internship training program. The DDEVAMC in Leavenworth became fully accredited in 1980. Both programs were reaccredited independently in 1999 for the maximum reaccreditation of five years. In May 2001, an APA formal visit took place to review the merger of the two programs into the current joint training program. Notification was received in July 2001 awarding continuing accreditation status as a merged training program. The most recent APA site visit review was completed in 2016, and our next site visit is anticipated in 2024.

Our Psychology Internship Program is a one-year pre-doctoral internship in professional psychology. The VAEKHCS supports 6 funded doctoral intern positions – 3 are located at the Topeka site and 3 at the Leavenworth site. Each site, historically and culturally different in its approach and training emphasis, recognize common competencies, evaluation, and administrative processes.

EXPECTATIONS AND BENEFITS:

1. Length of program: The 2080-hour internship begins in mid-July, and lasts for one calendar year. It is a 40-hour per week program (and we REALLY mean that!) lasting 12 months.
2. Training Components: Interns are required to complete a minimum of 520 hours of direct patient contact, 200 hours of supervision, and 100 hours of didactic training.
3. Funding: A stipend of \$34,862 (amount for 2025 year; 2026-27 TBD) is provided in 26 bi-weekly payments. Health benefits are available for interested interns.
4. The cost of living in this area is VERY reasonable, so the stipend in #3 goes a long way here!
5. Leave and paid time off consist of 11 federal holidays, 12 days of annual (vacation) leave, and 12 days of sick leave. Up to 48 hours of Authorized Absence is approved by the Site Directors for off-campus workshops and seminars.
6. Interns are strongly encouraged to complete their dissertations so they may be job-ready and begin documenting hours for licensure immediately following completion of the internship and graduation. We support your dissertation efforts **STRONGLY** while you are with us!
7. Staff and interns each have their own offices and government-issued laptops. Other training resources include video, audio and reproduction equipment, access to intralibrary loan through the VA, computer literature searches, periodicals and audio/video holdings, and auditorium facilities for meetings. (Yes – the above picture is of an actual intern office!)
8. As a Federal Employee, interns will complete pre-employment paperwork and some computer pre-training so that they can hit the ground running when they arrive on site.

INTERNSHIP ROTATIONS AND CASES

During the orientation phase, interns are familiarized with their respective medical center. They visit the various treatment units at their hospital as well as the staff psychologists assigned to those units. During this time, interns attend VA-required New Employee Orientation sessions and consider potential rotation sites and supervisors. Additionally, within the first couple of months interns have opportunities to visit the other site and participate in Psychology Service staff meetings with members from both sites.

Rotation options vary depending on the medical center location. See the specific site for more information on rotations.

SUPERVISION

Supervision is provided both formally and informally during the internship year. In keeping with APA and APPIC standards, a minimum of four hours of formal supervision is scheduled each week. Many additional hours are accumulated and logged through informal or extra scheduled time. Telesupervision is permitted at VAEK but limited to no more than 25% of the intern's total supervision. Interns must have achieved the appropriate graduated level of responsibility to participate in telesupervision.

Supervision is provided as follows:

Director of Training: Jamye Brown, Ph.D. –Topeka Site Director

Associate Director of Training: Danna Letsch, Ph.D. – Leavenworth Site Director

- Provides general administration of internship
- Provides supervision related to administrative tasks, and professional development
- Develops and maintains supportive relationship with interns at both sites
- Coordinates the didactic program
- Contributes to the evaluation of the interns
- Oversees completion of competency and minimum requirements
- Chairperson, Psychology Internship Training Committee

Primary Supervisor (assigned during orientation):

- Serves year-long as student advocate
- Provides general (student or issue focused) supervision
- Oversees the progress of competency achievement
- Recommends modification of training plan

Rotation Supervisor(s):

- Integrates activities of intern with rotation staff
- Supervises intern's rotation related administrative responsibilities
- Participates with intern in co-therapy/co-assessment as appropriate
- Oversees initiation and completion of rotation contracts
- Serves as case supervisor for ongoing psychotherapy and/or assessment cases
- Provides specific (patient focused) supervision of the therapy cases
- Oversees progress of intervention/assessment competencies

Peer Supervision:

- Provides intern opportunity for peer support/bonding
- Encourages opportunity for networking

Group Supervision:

- Site Training Directors meet with their site's interns to discuss intern class issues, professional development issues, discuss administrative issues, and discuss journal articles on ethics, scientist-practitioner models, etc.

OTHER SUPERVISED TRAINING EXPERIENCES

Whatever roles are attributed to psychologists in professional practice are appropriate training activities during the internship. Specifically, these include assessment, interviewing, psychotherapy, consultation, administration, research, program development, and training. While not all these experiences may be gained during the internship, the majority can be gained over the course of the internship through rotation assignments and psychotherapy and assessment casework.

DIDACTIC TRAINING

Formal didactic training addressing each of the seven competency areas is provided weekly. Each session is 2 hours and is presented through videoconferencing format. Thus, interns from both sites along with psychology staff join weekly for educational purposes. Each session is facilitated by a senior psychology staff member or outside mental health professional. In addition to these regularly scheduled seminars, additional opportunities for elective didactic training are provided through Continuing Medical Education, Psychiatry Grand Rounds, and special full-day seminars supported by Psychology Service with outside speakers. Online didactic training covering a wide variety of topics is also available. Interns are required to log a minimum of 100 hours of didactic training during the year.

INTERN EVALUATIONS

The evaluation process is an important aspect of the overall training program. It is an ongoing process that allows for quickly identifying and correcting growth areas. Criteria for competencies are outlined in the training manual. There are numerous avenues for demonstrating competencies, including rotation activity, individual cases, and case presentations. Evaluations are formally completed using a set of standardized competency measures and criteria at the end of each training period. This set of measures and criteria, along with a summary graph, guides supervisory feedback during mid-training period evaluations.

1. **Entry Level Evaluation:** During orientation, the intern is evaluated on entry-level requirements including, including general knowledge relevant to VA psychology, psychological report writing, and basic therapy skills (knowledge and demonstrated skills).
2. **Training period Evaluations:** The interns develop competency development plans with their supervisors at the beginning of a training period. Certain mandatory experiences, as outlined in the training manual, must be successfully completed during the internship year. The intern is evaluated informally midway and formally at the end of each training period (every four months).
3. **Case Conference Evaluations:** Interns are expected to present two case conferences each year as another means of demonstrating competencies: one assessment-oriented case and one therapy-oriented case.
4. **Competency Progress Form:** Supervisory Psychology staff and interns meet every four months to formally discuss the progress each intern is making. Competency Progress is noted and signed off on by all parties. Copies of the Competency Progress Form and summary are made available to the Academic Training Director.

VI. COVID-19 Response and Impact on Training

The primary goal of the VAEK Psychology Training Program is to protect the health and wellbeing of interns, staff, and Veterans while maintaining our commitment to providing high quality training that promotes the development of profession-wide competencies and meets our accreditation standards. Our program has implemented many modifications and safety precautions in response to the COVID-19 Global Pandemic. These include the implementation of telehealth, telesupervision, and telework. These changes are in line with flexibilities now permitted by the American Psychological Association (APA), Association of Psychology Postdoctoral and Internship Centers (APPIC), and the VA Office of Academic Affiliations (OAA) and are also supported by the Veterans Health Administration (VHA), VA Eastern Kansas, and our local psychology leadership.

The following sections provide information about modifications in recruitment and training:

RECRUITMENT

At this time, VAEK will offer only virtual interviews for prospective interns for the 2026-2027 training year. In the past (pre-covid), we have offered intern applicants an option for in-person interviews. However, given the dynamic nature of the pandemic, VAEK has decided to transition to only offering virtual interviews. In addition to our commitment to the health and safety of our interns, staff members, and Veterans – we also recognize the financial burden that can come with in-person interviews and want to alleviate that potential stressor for our applicants. Regarding COVID-19, VAEK will continue to follow the APPIC recommendations, CDC guidance, and local regulations.

CLINICAL TRAINING

The clinical rotations listed within this brochure are up to date, and all rotations listed are expected to be available during the 2026-2027 training year. Rotations have been adapted to enhance safety protocols for interns, Veterans, and staff. Where possible, interns are encouraged to use telehealth modalities for the provision of clinical services to our Veterans. At the current time, outpatient services are delivered both in-person and virtually. Our residential units are open and implementing the guidelines recommended by the Centers for Disease Control (CDC). When considering training plans throughout the year, we encourage interns to consider their own health factors and comfort levels and we support individualized decisions regarding rotation selection and COVID concerns.

SUPERVISION

VAEK supervisors remain committed to and active in the provision of high-quality supervision. In May 2020, we adopted a telesupervision policy permitting the use of secured virtual platforms for supervision.

DIDACTICS

The content and frequency of our didactic trainings have not been adversely impacted by COVID. Didactics for the current and upcoming cohorts are provided through virtual platforms (e.g., Microsoft Teams) allowing for a virtual, live, face-to-face connection between interns and the presenter.

VII. What's It Like Here? - Psychology Setting

VA Eastern Kansas Health Care System

VAEKHCS is one of eight medical centers in the Heartland Veterans Integrated Service Network (VISN) and is a part of the Veterans Health Administration (VHA)—the Nation's largest integrated health care system. VAEKHCS was created in 1997 by the integration of the Dwight D. Eisenhower VAMC in Leavenworth and the Colmery-O'Neil VAMC in Topeka. Although these two hospitals each have a long history of separately providing medical and psychiatric care, they are each strengthened by their integration. Patients who often travel between the two facilities are now assured continuity of care.

Integrity, Commitment, Advocacy, Respect, and Excellence (I CARE) define "who the VA is," VA's culture, and help guide the actions of staff across VA. Staff - at every level within VA - play a critical role to support VA's commitment to care and serve our Veterans, their families, and beneficiaries.

VAEKHCS Mission Statement

To provide accessible, courteous, comprehensive, and quality health care to veterans in an environment of excellence

VAEKHCS Vision Statement

WE Will:

PROMOTE the health and wellness of the veteran population we serve.

ACHIEVE distinction as a quality patient-driven health care system that provides the full range of medical, behavioral, rehabilitative, and preventive services to veterans and others.

IMPROVE our clinical care through research, education, and creative administration to become a model for the future.

VA Eastern Kansas Health Care System manages the healthcare needs for over 41,500 Veterans in Eastern Kansas and Western Missouri. VAEK is designated as a "general-type" hospital and provides comprehensive health care for many types of medical and mental health concerns. The VAEK catchment area is over 20,000 square miles across 39 counties. According to the Northeast Program Evaluation Center (NEPEC), VAEK serves rural (45.3%) and urban (54.1%) populations. Eighty-four percent of our Veteran consumers identify as male and 15.2% identify as female. Women Veterans continue to be a growing population at VAEK, doubling the percentage since 2018 and expecting to continue growing in the next decade. The modal age for VAEK Veterans is 75, ranging from 18 to late 90s. The Veteran ethnic breakdown includes 10.2% African Americans, 3.6% Hispanics/Latinos, and 1.5% American Indian/Alaska Native, 0.75% Asian, and 0.75% Native Hawaiian/Pacific Islander. For many Veterans, VA is their only source for health care, and 70% of the Veterans served at VAEK are engaged in outpatient mental health services.

There are approximately 2,000 full-time employees at VAEK. The workforce is ethnically diverse and educationally varied. Women comprise 66.55% of total employees. Seventy-eight percent of employees are White, 14% are African-American, 3.5% are Asian American, 2% are American Indian/Alaska Native, and 2.5% are Hispanic/Latino.

VAEK is invested in training the next generation of VA providers. Medical residents, psychology interns, and other allied health professions trainees work at VAEK. A recognized leader in technology, VAEK developed and implemented two important technology advancements: Bar Code Medication Administration System and Telephone Nurse Triage Program.

The health care system comprises of fourteen Service Lines:

- Administrative
- Behavioral Health
- Clinical Support
- Diagnostic Care
- Facilities Management
- Geriatrics and Extended Care
- Health and Finance
- Human Resources
- Information Management
- Medicine
- Nursing
- Pharmacy
- Social Work
- Surgery & Surgical Specialties

There are a total of 41 full-time psychologists at VA Eastern Kansas Health Care system (21 in Topeka and 20 in Leavenworth). Psychologists have their own administrative service (Psychology Service) but are assigned to Behavioral Health Service Line. Psychologists are actively involved as members of multidisciplinary teams. Behavioral Health Service Line consists of a wide range of treatment modalities for short- and long-term patients, and thus a continuum of care for patients. In addition to general psychiatry, there are specialized programs to meet specific patient needs. These programs, as you probably noticed from our rotation descriptions earlier in the brochure, include inpatient and outpatient PTSD, geropsychiatry, neuropsychiatry, addiction treatment, primary care, and others. Interns may be actively involved across these programs.

COLMERY-O'NEIL VA MEDICAL CENTER (COVAMC) (TOPEKA)

OVERVIEW:

Topeka is the capital city of the state of Kansas. The COVAMC is officially designated as a "general" type hospital and has a long history of being one of the finest psychiatric treatment centers in the nation.

A BIT OF HISTORY:

The Topeka VA had its beginnings as Winter General Army Hospital. Winter General was activated as a new military installation on December 26, 1942 to provide medical care to soldiers from Kansas, Missouri, Nebraska, and the Dakotas. The hospital specialized in serving soldiers returning from World War II who were experiencing neurological and psychological disorders.

In December 1945, Winter General was transferred to the Veterans Administration (VA). It was the first Army hospital in the nation to be taken over and operated by the VA following World War II. The new VA Medical Center was formally dedicated on January 11, 1946, with Dr. Karl A. Menninger, noted psychiatrist and author, as Manager. Under his leadership, the hospital became a model for other VA psychiatric hospitals and a training center for the psychiatrists needed urgently by the VA. In the exciting first year of operation, there were 112 residents in psychiatry, five in surgery, four in medicine, and one in otorhinolaryngology.

The number of psychiatrists trained in this hospital exceeded all other hospitals in the United States combined. In addition, specialized training programs were initiated for clinical **psychologists**, nursing personnel, social workers, corrective therapists, speech therapists, occupational therapists, and music therapists. The buildings transferred to the VA were temporary structures. Although new buildings were authorized in 1946, it was not until 12 years later that a new, 23 million dollar, 1,011-bed hospital was dedicated on August 24, 1958. Within a six-hour period, the movement of patients and personnel from the old to the new hospital structure was completed. The present hospital, consisting of 20 interconnected buildings and 174 operating beds, is designed to meet the needs of the current patient population.

DWIGHT D. EISENHOWER VA MEDICAL CENTER (DDEVAMC) (LEAVENWORTH)

OVERVIEW:

Located in Leavenworth, KS, within a short twenty-minute drive from the Kansas City International Airport, the DDEVAMC supports a General Medical and Surgical Hospital, Community Living Center, and Domiciliary. In addition, it supports outpatient, aftercare, and community-based programs in St. Joseph, MO and Kansas City, KS.

A BIT OF HISTORY:

The Dwight D. Eisenhower VA Medical Center (DDEVAMC) was established as the Western National Home for Disabled Veterans in 1885. DDEVAMC is set in rural America on a beautiful campus on the rolling bluffs of the Missouri River. Veterans and staff who find the rural way of life less stressful are attracted to this small midwestern Veterans Affairs facility. With 20 full-time psychologists, interns find they are quickly integrated into the professional culture, and are given opportunities to expand their knowledge base and gain both breadth and depth in clinical training. Veterans and staff alike value the opportunities gained by being part of a psychology internship training facility.

VIII. Other Than Great Training, What Can I Do Here? – Life outside VA

IN TOPEKA...

General Information about the Community

Topeka is the capitol city of Kansas and the seat of Shawnee County. The population is just over 125,000. Climate is variable – with pleasant springs and mild falls, but also hot summers and cold winters. Forbes magazine, in 2007, named Topeka as one of the leading US cities for greatest variations in temperatures!

Topeka housing is very affordable with rental and purchase prices somewhat below the national average, and a range of housing options are available. The Medical Center is easily accessible to other parts of the city. There is no traffic here! Most in-city commutes are less than 10 minutes (maybe 15 if you include stopping for coffee).

The Topeka area is served by four public school districts, and there are several private schools and a parochial school system which provides classes through Grade 12. Washburn University is considered one of the Midwest's finest urban universities and offers a wide variety of undergraduate and graduate degree programs. Its School of Law and Business are nationally known. Kansas State University is 60 miles west in Manhattan, and the University of Kansas is in Lawrence, 25 miles east.

Arts, Culture, Outdoor Activities, Recreation, Festivals, etc. (Remember... this really is a 40-hour work week!)

Topeka has a thriving arts scene! Recognized by the New York Times, the NOTO (North Topeka) district is a vibrant neighborhood of art galleries, cafes and boutiques, and antique emporiums all housed in historic buildings. ARTSCONNECT hosts a First Friday Artwalk, in which galleries all across the city host special events each month to support local artists, strengthen the community, and support the economy. Topeka also have a symphony orchestra, two dinner theaters, and a ballet company. The Mulvane Art Center at Washburn University is the oldest accredited art museum West of the Mississippi and houses a permanent collection of American paintings and sculpture. The Kansas History Museum gives visitors a panorama of the state's past. In addition, the Kansas Expocentre and Topeka Performing Arts Center provides an excellent forum for headline entertainers throughout the year.

The Brown v. Board of Education National Historic Site is located in Topeka, and The Brown v. Board Mural Project was recently completed. It is located across the street from the National Historic Site. The mural explores themes of equality and justice through the eyes of young people in our community. Artist Michael Toombs directed the painting of the 130' x 30' wall along with a team of artists and thousands of members of the community.

Topeka hosts many long-standing, annual festivals and events through-out the year. Just to name a few:

- Mulvane Art Fair – Art Fair with over 90 national and regional artists on the Washburn Campus with live music, food, and hands-on-art-making experiences.
- Huff 'n Puff Hot Air Balloon Festival – Watch or ride (tethered) more than 30 colorful hot air balloons as they are launched over Lake Shawnee.
- Heartland Military Day – Civil War and WWII reenactments, special exhibits, Big Band and Swing concerts at the Museum of the Kansas National Guard at Forbes Field.
- St. Patrick's Day Celebration - A Topeka tradition featuring the Great Topeka Bed Race (and a parade).
- Fiesta Mexicana – A celebration of Topeka's Mexican culture, including a parade downtown and five nights of traditional Mexican food, music, and dancing.
- Tulip Time - Spring is breathtaking in Topeka! See thousands of tulips and daffodils in picturesque gardens around town, including Ted Ensley Gardens at Lake Shawnee, Old Prairie Town and Gage Park's Reinisch Rose Garden and Doran Rock Garden.
- Sunflower Music Festival - Annual series of donation-only orchestra concerts, chamber music, and jazz at White Concert Hall on the Washburn University campus from world-renowned musicians from across the North and South America.

Topeka offers its residents a wide variety of recreational activities. The area has five public and four private golf courses. An excellent Parks and Recreation program sponsors team/individual sports of all kinds, including yoga, fencing, softball, and volleyball (just to name a few!). Topeka has miles of paved, gravel, and wooded trails. The Rails-to-Trails project in Kansas includes 23 rail-trails (287 miles) and is growing. Canoeing, kayaking, and hiking are also available along the Kansas River, a National Water Trail connecting the river from Junction City to where it meets the Missouri River near Kansas City. There are numerous public tennis courts, swimming pools, and health/fitness centers in Topeka. Within 50 miles

of the city are five large lakes and reservoirs ideal for swimming, boating, skiing, and fishing. Hunters find many opportunities to pursue their sport in the surrounding countryside. Topeka is the proud home of the Pilots, a NAHL hockey team. The Sunflower State Games are held here every July, which feature more than 45 sports for people of all ages and skill levels – everything from track and field, horseshoes, adventure races and BMX, to cricket, disc golf and martial arts. Topeka is also home to a motorsports complex that features a unique 2.5-mile road course and a 1/4-mile dragstrip and brings in races from NASCAR and NHRA.

IN LEAVENWORTH...

General Information about the Community

The City of Leavenworth was founded in 1854 and proudly hales as the “First City of Kansas.” The city grew just south of Fort Leavenworth, and its location on the Missouri River made it a destination for refugee African-American slaves seeking freedom from the slave state of Missouri in the antebellum years. Currently, about 35,000 people reside in the city of Leavenworth. Rental housing is available in the Leavenworth area and is priced below the national average. However, many interns prefer to live in Lawrence or the Kansas City Metro where options are plentiful. Staff live in Leavenworth or commute from Kansas City, KS; North Kansas City, MO; Overland Park, KS and Lawrence, KS.

Arts, Culture, Outdoor Activities, Recreation, Festivals, etc.
(Remember... this really is a 40-hour work week!)

Leavenworth has many events and festivals throughout the year. Some of the more noted ones include Hidden Art Locked Away, Frontier Army Encampment, Great American Yard Sale at Ft. Leavenworth, Annual Herb Market, County Fair, Antique Shows, Festival of Trees, Haunted Houses of Ft. Leavenworth, lots of parades, and the Candlelight Vintage Home Tours. Other tours available include the Victorian Carroll Mansion and Museum, Ft. Leavenworth, Frontier Army Museum, St. Mary College, Heimhof Winery, and First City Museum. These are all in town. Nearby Weston offers antiques, a small town winery, and hometown atmosphere.

Fort Leavenworth, just north of the city, is the oldest Fort west of the Mississippi River that has been in continuous operation. Among numerous historical sites, there is visible evidence of a cut in the terrain that was made by heavy-laden wagons pulled by teams of oxen as they journeyed west on the Oregon and Santa Fe Trails. Fort Leavenworth is home to the Buffalo Soldier Monument. This nationally-recognized monument was dedicated in July 1992, honoring the 9th and 10th Cavalry Regiments comprised of black soldiers who were called "Buffalo Soldiers". General Colin Powell initiated this effort while stationed at Fort Leavenworth. As a matter of record, the Buffalo Soldiers have been honored for their bravery and service more than any other American military unit, yet history fails to reflect this.

The City of Leavenworth has 424 acres of parks, play areas, and spacious grassy areas. The parks offer numerous amenities such as a dog park, tennis courts, playgrounds, softball and baseball fields, picnic shelters, horseshoe courts, sand volleyball courts, basketball courts, an outdoor summer aquatic center, a campground, and trails. Leavenworth is on the west bank of the Missouri River, and there are great opportunities here for outdoor adventures and beautiful views (check out the view from the window of Dr. Heflin's office!)

IN THE KC METRO AND LAWRENCE AREAS...

Kansas City is only about 30 minutes from Leavenworth and 60 minutes from Topeka. The KC Metro area is a 15-county metropolitan area anchored by Kansas City, Missouri and includes both Missouri and Kansas. The population is over 2,100,000 and includes a number of other cities and suburbs, the largest being Overland Park, Kansas; Kansas City, Kansas; Olathe, Kansas; and Independence, Missouri; each over 100,000 in population.

Arts, culture, sports, recreation, relaxation, great food and drink, history, fabulous shopping – all are in Kansas City. The multitude of activities in KC is beyond the scope of this brochure, but here are some of our favorites...

Kansas City is home to the Nelson-Atkins Museum of Art, and also has many fine art galleries and studios, contemplative public art installations, and multi-dimensional art-related events. The Crossroads Arts District is home to more than 400 local artists and 100 independent studios, and is one of the most concentrated gallery districts in the nation. First Fridays happen all across the city – including the Crossroads, 18th and Vine, and the West Bottoms - each month with vintage markets, food trucks, street music, aerial performances, sidewalk vendors, buskers, live theater, traditional and avant-garde art exhibits.

The 18th and Vine District in Kansas City is home to the Negro Leagues Baseball Museum and the American Jazz Museum. 18th and Vine is internationally recognized as a hub for African-American businesses and was also noted to be the birthplace of Kansas City Jazz. Many important Jazz artists have played this area, but Charlie Parker is most notable. The KC Monarchs played from 1920 to 1965, and fielded Satchel Page, Buck O'Neil, and Jackie Robinson.

The National World War I Memorial and Museum houses more than 55,000 objects and is the only American museum dedicated solely to preserving the objects, history, and personal experiences of those during WWI. Opened in 1926 as Liberty Memorial, it was expanded and opened to the public in 2006 as a museum. Just east of Kansas City in Independence, MO is the Harry S. Truman Presidential Library and Museum. Kansas City is also home to Union Station, Historical Westport, the Mahaffie Stagecoach Stop and Farm, the Steamboat Arabia Museum, and Thomas Hart Benton Home.

Kansas City also has a thriving performance scene including the new Kauffman Center for the Performing Arts and the T-Mobile Center which hosts large concerts. Other venues - such as Starlight Theatre, The Folly, and The Music Hall - provide great opportunities for live entertainment. Great music is available throughout the city. The downtown KC area has been revitalized and is home to the Power and Light District – where there are ample options for entertainment, food, and drink.

Sports fans will enjoy the options in KC. Baseball fans can catch a Kansas City Royals game at the K throughout the summer. The Kansas City Chiefs are our professional football team – and we are hoping for another great season this year with Patrick Mahomes at the helm and Taylor Swift in the crowd! Sporting KC is the awesome men's soccer team, and (soccer-fan or not) joining the KC Cauldron is awesome. KC Current is the women's soccer team (Brittany Mahomes is co-owner). We are really excited that KC has been officially named a FIFA World Cup 2026 host! There are also minor league sports in

Kansas City, including the T-Bones (baseball), Storm (women's tackle football), Mavericks (hockey), Roller Warriors (women's roller derby), and Blues (rugby).

Kansas City also boasts some pretty great food – and barbeque is at the top of the list! Kansas City Joe's, Arthur Bryant's, Jack Stack, Q39, and LC's are all pretty fabulous, and there are many more! Other treats include Lydia's (Italian), Meshuggah Bagels, Betty Rae's Ice Cream, Blue Sushi and Sake (sushi), Clay and Fire (Near Eastern), Café Gratitude (vegetarian), Novel (American), Rye (fried chicken), Stroud's (fried chicken -because who can ever get enough fried chicken?), the Peanut (wings – because... chicken is good!), Upper Crust (pie), The Capitol Grille (Steak), Third Street Social (Southern-ish), Black Dog Coffee/Ibis Bakery, Korma Sutra (Indian), Donut Lounge, Blue Koi Noodles and Dumplings, and D'Bronx Pizza and Deli.

Lawrence, Kansas is a community of 87,000 and is a vibrant college town - home to Haskell Indian Nations University and the University of Kansas (KU). On the campus at KU, you can catch a Jayhawks basketball game at historic Allen Fieldhouse, visit the Spencer Museum of Art or the KU Biodiversity Institute and Natural History Museum, or see the Robert J. Dole Institute of Politics. You can also catch a Jayhawk football game... but, keep your expectations low. Outdoor activities in Lawrence include the Clinton Lake Recreational Area, the Haskell-Baker Wetlands, and Rock-Chalk Park. Shopping, food and drink is plentiful on Massachusetts (Mass) Street.

Want to explore further...

The Kansas City International Airport is about 25 minutes north of the Leavenworth community and 75 minutes from Topeka. It is served by many major airlines, including American, Southwest, Delta, United, and Spirit.

COMMUTERS...

Interns commonly opt to live in the KC Metro or Lawrence areas while interning at VAEK. A federally-funded rideshare program is available from both the KC and Lawrence areas. Interns are eligible to participate and can **APPLY** for this program **BASED UPON AVAILABILITY**.

IX. Sounds Great! What Do I Do Next? Application & Selection Procedures (Thanks for Reading This Far!)

APPLICANT QUALIFICATIONS:

To be considered for the predoctoral stipend internship program, the applicant must be a full time student actively involved in pursuing the Ph.D. or Psy.D. degree in Clinical or Counseling Psychology from an APA-ACCREDITED PROGRAM. The student must have completed a minimum of 500 practicum hours and be within one year or less of completing all requirements for the Ph.D. or Psy.D. They must have completed all graduate prerequisites for internship candidacy including completion of comprehensive exams by November 15th of the fall in which they are applying for internship. All applicants must have U.S. citizenship to be considered for an internship with the VA. A male applicant born after 12/31/1959 must have registered for the draft by age 26 to be eligible for any US government employment, including selection as a paid VA trainee. Male applicants must sign a pre-appointment Certification Statement for Selective Service Registration before they can be processed into a training program. Interns and Fellows are subject to fingerprinting and background checks. Match result and selection decisions are contingent on passing these screens. VA conducts drug screening exams on randomly selected personnel as well as new employees.

ONLINE APPLICATION PROCEDURE:

Students may now access the AAPI Online (www.appic.org, click on "AAPI Online") to create and develop their application for the selection process. In order to apply to VAEKHCS, please complete the APPIC online registration. **In the cover letter, please specify to which site (Leavenworth, Topeka, or both) you are applying.** Additionally, please provide us with three letters of recommendations and your graduate school transcripts. We do not require any supplemental information to the online application. The AAPI Online should be used by students to apply to all APPIC-member internship programs as well as those non-member programs that register to participate in the APPIC Match.

POST APPLICATION PROCESS:

The Department of Veterans Affairs and the VAEKHCS is an equal opportunity employer. VA does not tolerate unlawful discrimination, including workplace harassment, based on race, color, religion, national origin, sex (including gender identity, transgender status, sexual orientation, and pregnancy), age (40 or older), disability, genetic information, marital status, parental status, political affiliation, or retaliation for opposing discriminatory practices or participating in the discrimination-complaint process. This applies to all terms and conditions of employment, including recruitment, hiring, promotions, transfers, reassignments, training, career development, benefits, and separation.

Training staff recognize the impact of race, ethnicity, sexual orientation, age, disability, culture, and gender across all levels of psychological theory, research, practice, and education. We seek both staff and interns who are strongly committed to diversity and who are supportive of providing a welcoming work and training environment. We welcome members of underrepresented groups including women and minorities, and encourage them to apply for positions. The training staff at the VAEKHCS believes that we provide a safe and encouraging environment for the exploration of multicultural and diversity issues.

Each site (COVAMC and DDEVAMC) appoints a minimum of three psychologists to serve on independent Intern Selection Committees. Each member reads, reviews, and scores the applications assigned to them. After all applicants have been reviewed and rank ordered, the top applicants at each site will be offered interviews. Applicants not selected for interviews will be notified (by e-mail) by December 15th that they are no longer candidates for the VAEKHCS internship. In an effort to reduce the financial burden and alleviate the costs of travel for interviews, all interviews will be conducted virtually. Interviews are scheduled for early- to mid-January. Applicants may be offered interviews at one or both sites.

Following the last scheduled applicant interview, the Intern Selection Committees will meet again with additional information gathered during the interviewing process and will rank order their respective candidates. There will be no notification for candidates who are no longer under consideration.

The VAEKHCS submits two lists to the National Matching Service: one list is submitted ranking candidates for the COVAMC (Topeka) program (National Matching Service Number is 130412) and one list for the DDEVAMC (Leavenworth) program (National Matching Service Number is 130411). Lists must be submitted in accordance with yearly dates established by APPIC. Applicants may be listed by one or both sites.

APPIC Match Day is generally in late February, set yearly by APPIC. Following confirmation of match results, the Site Directors will confirm the selection of interns by phone and letter to the applicant and the applicant's university training director. Selected interns will be asked to provide a written statement officially accepting and committing to the internship training program. Interns will be required to complete an application for federal employment, to include a physical examination, prior to the internship start date. This will be coordinated through VAEKHCS administrative staff. We recommend completing the physical examination at VAEKHCS. Additionally, interns will be assigned computer based training modules to be completed prior to their arrival.

X. What's Left? The Other Stuff...

Requirements for Completion—LEAVENWORTH AND TOPEKA

COMPETENCY-BASED MODEL

The training program is a sequentially graded competency-based model culminating in the production of scientist-practitioner psychologists. Competency evaluation begins with orientation and ends with year-end evaluations.

Specific criteria for demonstrating competencies are provided in the training manual that each intern receives during orientation week. Criteria include demonstration of the nine profession wide-competencies, which include research and scholarly inquiry; ethical and legal standards; individual and cultural diversity; professional values, attitudes, and behaviors; communication and interpersonal skills; assessment, conceptualization, and diagnosis; intervention; supervision; and consultation and interpersonal/interdisciplinary skills. Demonstrated competency in these areas is required for successful completion of the internship.

Competency evaluation begins during orientation with which each intern provided the opportunity to demonstrate criteria-based competency in administration and scoring of selected psychological instruments as well as psychological report writing. Additionally, interns are provided the opportunity to demonstrate basic therapy knowledge and skills of therapeutic interventions. Seminars and skills training are provided to work on and correct any entry-level deficits.

The specific criteria for competencies to be achieved during the year are made available to the interns in the training manual. While some competencies may be achieved on more than one rotation (e.g., intervention competency may be achieved in the Mental Health Clinic, PTSD Unit, and other treatment areas), other competencies may only be gained in specific labs (e.g., Neuropsychology, Motivational Interviewing with substance use concerns). While all interns must achieve a targeted level of competence, at the intern's initiative, other competencies may be achieved by meeting established criteria set forth in the training manual and specialized competencies may be acquired with the approval of rotation and case supervisors and the director of training.

Administrative Policies and Procedures

INTERN AND EMPLOYEE GRIEVANCES

It is the policy of the VAEKHCS to identify and make reasonable and proper efforts to correct causes of employee dissatisfaction on the job. Careful consideration will be given to intern and employee grievances. The interns and staff use the formal grievance procedure of the VAMC should such an issue arise. There is also a formal process to monitor intern progress and remediate training problems. The policies and procedures are delineated in the intern manual which each intern receives during orientation.

GOVERNING PRINCIPLES

The VAEKHCS Psychology Internship Training Program abides by APA, APPIC, and National Matching Service (NMS) guidelines in the selection of interns. Furthermore, VAEKHCS is an Equal Opportunity Employer. VAEKHCS does not tolerate unlawful discrimination, including workplace harassment, based on race, color, religion, national origin, sex (including gender identity, transgender status, sexual orientation, and pregnancy), age (40 or older), disability, genetic information, marital status, parental status, political affiliation, or retaliation for opposing discriminatory practices or participating in the discrimination-complaint process. This applies to all terms and conditions of employment, including

recruitment, hiring, promotions, transfers, reassignments, training, career development, benefits, and separation.

APPIC provides their policies and procedures and the NMS policies on the website: www.appic.org. The website also provides information on filing grievances with the APPIC Standard and Review Committee should applicants perceive that policies have been violated.

This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept, or use any ranking-related information from any intern applicant.

Facility and Training Resources

All interns at VA Eastern Kansas Health Care system have a private furnished office with computer access. All computers are loaded with the VA electronic records system and Microsoft Office software. Computers do have access to the internet, and there is access to an online research database.

Employee Assistance Program (EAP)

EKHCS contracts with New Directions to provide employee assistance. Services are confidential and range from helping with placement of elderly family members in another state to crisis intervention for a staff member. There is no cost to staff or interns for this service.
